LIFETIMEWOOL SPECIAL ISSUE

Foreword i–ii

RESEARCH PAPERS

The wool production and reproduction of Merino ewes can be predicted from changes in liveweight during pregnancy and lactation

M. B. Ferguson, A. N. Thompson, D. J. Gordon, M. W. Hyder, G. A. Kearney, C. M. Oldham and B. L. Paganoni 763–775

The birthweight and survival of Merino lambs can be predicted from the profile of liveweight change of their mothers during pregnancy

C. M. Oldham, A. N. Thompson, M. B. Ferguson, D. J. Gordon, G. A. Kearney and B. L. Paganoni 776–783

Improving the nutrition of Merino ewes during pregnancy and lactation increases weaning weight and survival of progeny but does not affect their mature size

A. N. Thompson, M. B. Ferguson, A. J. D. Campbell, D. J. Gordon, G. A. Kearney, C. M. Oldham and B. L. Paganoni 784–793

Improving the nutrition of Merino ewes during pregnancy increases the fleece weight and reduces the fibre diameter of their progeny's wool during their lifetime and these effects can be predicted from the ewe's liveweight profile

A. N. Thompson, M. B. Ferguson, D. J. Gordon, G. A. Kearney, C. M. Oldham and B. L. Paganoni 794–804

On-farm paddock-scale comparisons across southern Australia confirm that increasing the nutrition of Merino ewes improves their production and the lifetime performance of their progeny

R. Behrendt, A. J. van Burgel, A. Bailey, P. Barber, M. Curnow, D. J. Gordon, J. E. Hocking Edwards, C. M. Oldham and A. N. Thompson 805–812

Managing the nutrition of twin-bearing ewes during pregnancy using Lifetimewool recommendations increases production of twin lambs

J. E. Hocking Edwards, K. J. Copping and A. N. Thompson 813–820

Whole-farm profit and the optimum maternal liveweight profile of Merino ewe flocks lambing in winter and spring are influenced by the effects of ewe nutrition on the progeny's survival and lifetime wool production

J. M. Young, A. N. Thompson, M. Curnow and C. M. Oldham 821–833

The merit of condition score and fat score as alternatives to liveweight for managing the nutrition of ewes

A. J. van Burgel, C. M. Oldham, R. Behrendt, M. Curnow, D. J. Gordon and A. N. Thompson 834–841

The national Lifetimewool project: a journey in evaluation

J. J. Dart, M. Curnow, R. Behrendt, C. Kabore, C. M. Oldham, I. J. Rose and A. N. Thompson 842–850

Successful adoption of new guidelines for the nutritional management of ewes is dependent on the development of appropriate tools and information

M. Curnow, C. M. Oldham, R. Behrendt, D. J. Gordon, M. W. Hyder, I. J. Rose, J. W. Whale, J. M. Young and A. N. Thompson 851–856

Evaluation of the impact of Lifetimewool on sheep producers

A. Jones, A. J. van Burgel, R. Behrendt, M. Curnow, D. J. Gordon, C. M. Oldham, I. J. Rose and A. N. Thompson 857–865

Participation in Lifetime Ewe Management results in changes in stocking rate, ewe management and reproductive performance on commercial farms

J. P. Trompf, D. J. Gordon, R. Behrendt, M. Curnow, L. C. Kildey and A. N. Thompson 866–872
