Contents

Ecology and Ecophysiology

Multi-decadal increases in shrub abundance in non-riverine red gum (*Eucalyptus camaldulensis*) woodlands occur during a period of complex land-use history.

*Jodi N. Price and John W. Morgan*  163–170

Causes of stability in the alpine treeline in the Snowy Mountains of Australia – a natural experiment.

*Ken Green*  171–179

Conservation Biology and Biodiversity

Clonality and hybrid origin of the rare *Eucalyptus bennettiae* (Myrtaceae) in Western Australia.

*E. Walker, M. Byrne, B. Macdonald, D. Nicolle and J. McComb*  180–188

Vascular plant distribution in relation to topography, soils and micro-climate at five GLORIA sites in the Snowy Mountains, Australia.

*Catherine M. Pickering and Ken Green*  189–199

Planting conditions improve translocation success of the endangered terrestrial orchid *Diuris fragrantissima* (Orchidaceae).

*Zoë F. Smith, Elizabeth A. James, Mark J. McDonnell and Cassandra B. McLean*  200–209

Patterns in vascular plant species density in tall alpine herbfield along an increasing altitudinal gradient in an Australian alpine region.

*Catherine M. Pickering and Sarah Butler*  210–220

Structure and Development

The development and characteristics of periderm and rhytidome in *Eucalyptus marginata*.

*E. O’Gara, K. Howard, I. J. Colquhoun, B. Dell, J. McComb and G. St. E. J. Hardy*  221–228

Internal secretory spaces in thickened underground systems of Asteraceae species.

*Graziela Cury and Beatriz Appezzato-da-Glória*  229–239

Cell and Molecular Biology

Perfusion culture of *Glycyrrhiza inflata* suspension cells in a stir-tank bioreactor.

*Guirong Wang and Nian Min Qi*  240–247
