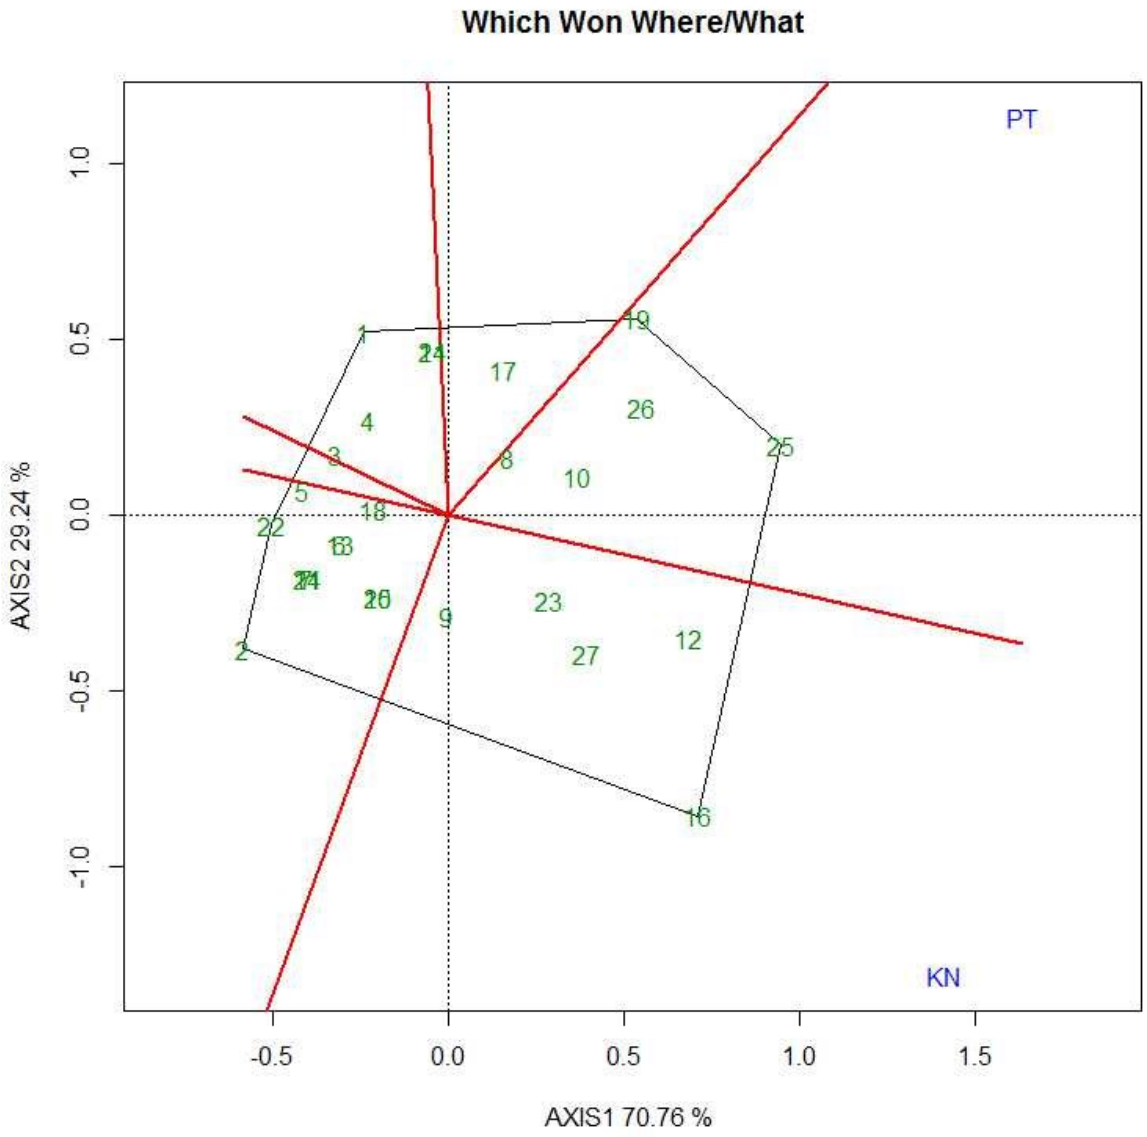
Supplementary Fig. 1. The 'which-won-where' view of the HA-GGE biplot for mega-environment-II. No transformation of data (transform = 0); and data were centred by means of the environments (centring = 2). The biplot was based on 'symmetric scaling', i.e. genotype and environment focused singular-value partitioning, and thus it is best suitable for portraying the association between both genotypes and environments. Locations are: FZ, Faizabad; GP, Gurdaspur; KN, Kanpur; PT, Pantnagar; SH, Shillongani. Numbers correspond to genotypes as listed in Table 3.



Supplementary Fig. 2. The 'which-won-where' view of the HA-GGE biplot for mega-environment-III. No transformation of data (transform = 0); and data were centred by means of the environments (centring = 2). The biplot was based on 'symmetric scaling', i.e. genotype and environment focused singular-value partitioning, and thus it is best suitable for portraying the association between both genotypes and environments. Locations are: FZ, Faizabad; GP, Gurdaspur; KN, Kanpur; PT, Pantnagar; SH, Shillongani. Numbers correspond to genotypes as listed in Table 3.
