The hills were indeed alive with the sounds of physics when the South African Geophysical Association (SAGA) held its 14th Biennial Conference and Exhibition at Champagne Sports Resort in the majestic Central Drakensburg Mountains from 6 to 9 September 2015. Attendance at the event was good, with over 150 delegates from as far afield as Canada and Australia, and representing private and public sectors of the mining and petroleum industries. Apart from the eclectic array of workshops and off-site field trips, the Conference was a platform for authors to showcase their works via either oral or poster presentation. The overall theme of the Conference was '*Breaking Barriers*', a specific challenge to the presenting authors to 'Think Differently'. This subset represents a collection of papers based on presentations made at the Conference. Several case studies, innovative data processing and modelling techniques were presented, some of which form part of this collection. A number of other wide-ranging subjects were addressed, which gives testament to the diverse nature of the SAGA membership.

With the 14th Conference in the rear-view, we look forward to hosting you and your colleagues in Cape Town at the 15th Biennial Conference and Exhibition in September 2017 ([www.sagaconference.co.za](http://www.sagaconference.co.za) for more information).
