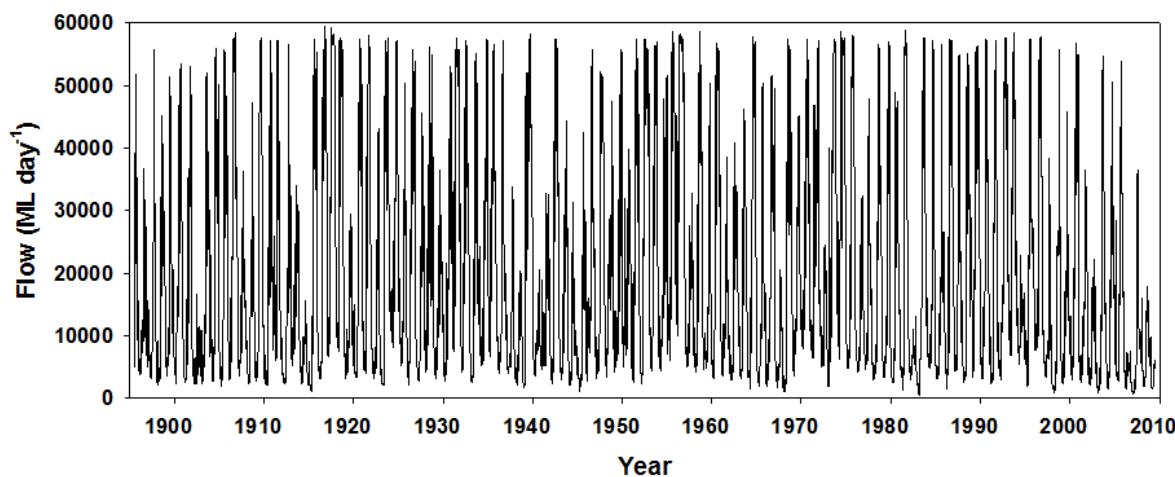

Fig. S1. MSM-BIGMOD (Ravalico *et al.* 2007) modelled flow data at Torrumbarry on the Murray River from 1885 to 2009 assuming no river regulation. Overbank flooding into Koondrook-Perricoota Forest commences at $\sim 18\,000 \text{ ML day}^{-1}$ and moderate flooding occurs at $\sim 30\,000 \text{ ML day}^{-1}$.

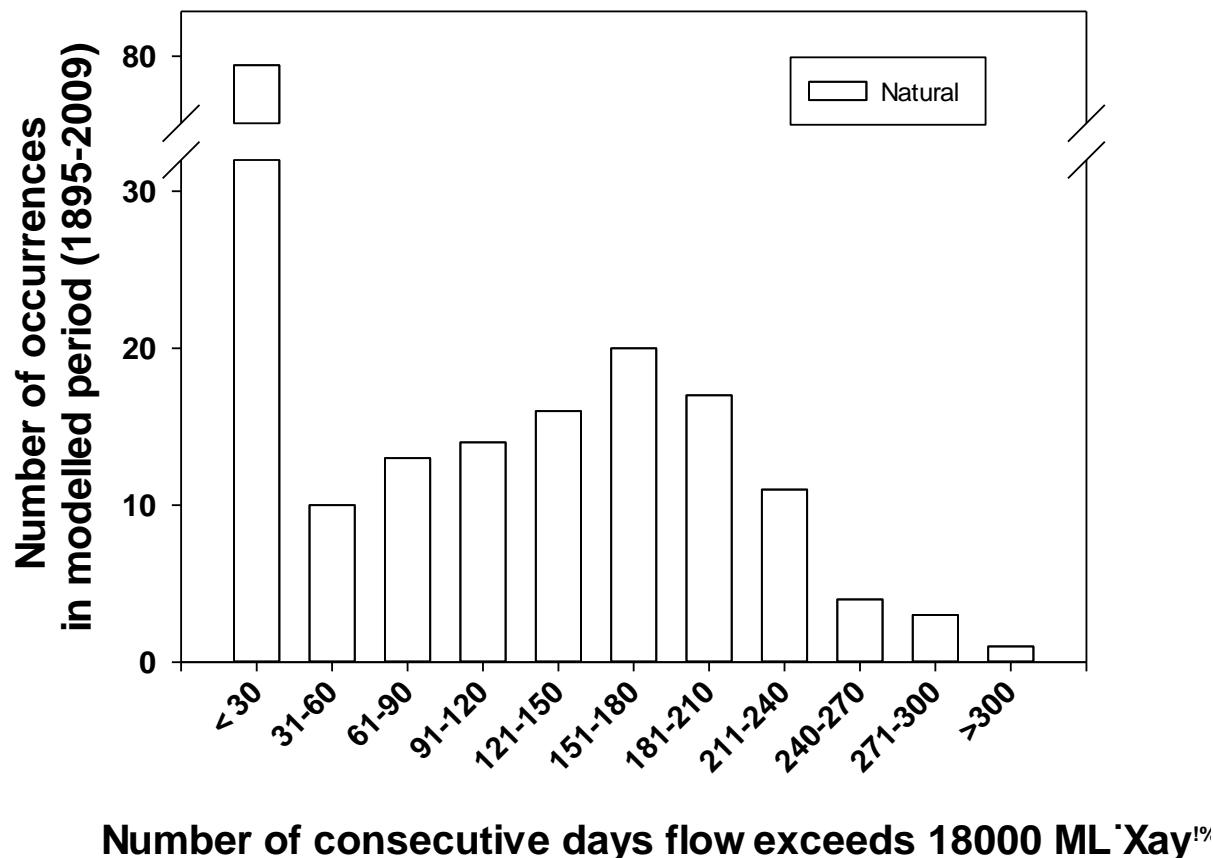

Fig. S2. Histogram showing the frequency of overbank flows of a given duration at Torrumbarry for the period 1885–2009 assuming no river regulation (based on the modelling presented in Fig. S1).
