This Supplementary material comprises three animations depicting discharge direction and magnitude in the study area during 7 March 2014 (see <https://youtu.be/aCaehym6h5I>), 25 March 2014 (see https://youtu.be/3jTkqbyIQ_M) and 4 April 2014 (see https://youtu.be/2rbCNwAN_M8). These dates correspond to Fig. 4 in the main text. The bottom panel is the discharge at QS. The values presented are the interpolated velocity fields estimated from acoustic Doppler current profiler (ADCP) data over the study period. The size of the arrow indicates magnitude of velocity in that location.
