Estimating the sustained swimming ability of coral reef fishes
J. L. Johansen, C. J. Fulton and D. R. Bellwood 233

Relating species traits to environmental variables in Indonesian coral reef sponge assemblages
N. J. de Voogd and D. F. R. Cleary 240

Ecosystem metabolism in a dryland river waterhole
C. S. Fellows, M. L. Wos, P. C. Pollard and S. E. Bunn 250

A decline in the abundance and condition of a native bivalve associated with Caulerpa taxifolia invasion
J. T. Wright, L. A. McKenzie and P. E. Gribben 263

Two monitoring methods that assess species composition and spatio-temporal trends in bycatch from an important temperate rock lobster (Jasus edwardsii) fishery
D. J. Brock, P. J. Hawthorne, T. M. Ward and A. J. Linnane 273

Increased density, biomass and egg production in an unfished population of Western Rock Lobster (Panulirus cygnus) at Rottnest Island, Western Australia

Depth, sediment type, biogeography and high species richness in shallow-water benthos
N. Coleman, W. Cuff, J. Moverley, A. S. H. Gason and S. Heislers 293

Based on their work in the intermittent Cooper Creek system of eastern Australia, Fellows et al. (p. 250) suggest that models of lake metabolism based on temperate ecosystems can be expanded to include dryland river waterholes. Such waterholes group with eutrophic lakes due to their high inorganic nutrients, low allochthonous inputs, and autotrophic metabolic balance.
