

tions. These we wish to thank. Especially enthusiastic in this regard have been M. D. Murray, S. G. Lane and C. Campion, who acted as leaders of the Malabar group. We must also acknowledge with appreciation the consistent enthusiasm and generosity of Mr. A. Mothersdill who has contributed in many ways to the successful work at Bellambi, and Mr. G. Reid who gave his services as launchman at Malabar.

VII. ADDENDUM

Since the foregoing notes were submitted for publication, Falkland Islands Dependencies Survey personnel have notified the Wildlife Division of the C.S.I.R.O. that Wandering Albatross no. 140-02111, an adult male banded off Bellambi on August 23, 1958, was present on Bird Island, South Georgia, from December 29, 1958, to March 6, 1959. During that time it occupied a territory with a mate, but did not breed.

Tasmanian 'Records'.—On January 12, my wife and I saw a Tattler (*Tringa* sp.) feeding on a rock reef on the beach at Marrawah in the extreme north-west of Tasmania. The only other records of Tattlers in this State have been in the south-east at South Arm, and at Pittwater where Mr. L. E. Wall had a bird under observation at intervals from 1948.

On Good Friday, March 27, at Little Swanport on Tasmania's east coast, we had two Little Egrets (*Egretta garzetta*) under observation from thirty feet for over half an hour. We could find no deviation from field descriptions obtained at Dunalley in 1957 and 1958, which are the subject of a recent submission to *The Emu*.—PETER F. BOLGER, Medway Point, Tas., 21/4/59.
