

Supplementary material for**Using the scientific listing process to better understand climate change risk to threatened species and ecological communities in New South Wales***Claire A. Laws^{A,B}, Nola Hancock^A and Michelle R. Leishman^A*^ADepartment of Biological Sciences, Macquarie University, NSW, 2109, Australia^BCorresponding author. claire.laws@mq.edu.au

Table S1. Descriptions of habitat for the 53 threatened species and 26 ecological communities that have climate change listed as a threat in their Final Determinations. Similar habitat types have been grouped together. Note that some species have more than one category.

| Habitat | No. species (53) | No. of ecological communities (26) |
|----------------------------|-------------------------|---|
| Wet areas | 30 | 13 |
| Montane | 23 | 7 |
| Marine | 5 | 0 |
| Rocky/Skeletal soil | 6 | 1 |
| Coastal | 6 | 8 |
| Forest/Woodland | 10 | 0 |
| Sandy soil | 0 | 3 |
| Rain shadow | 0 | 1 |
| Gully | 0 | 1 |
| Volcanic diatrema | 0 | 1 |
