Papers submitted to Pacific Conservation Biology are vigorously reviewed and edited. Nonetheless, the views put by authors are their own and do not necessarily reflect those of the editors or the Publisher.

COPYRIGHT

Submission of a paper to Pacific Conservation Biology will be taken to imply that it presents original unpublished work, not under consideration for publication elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the Publisher if and when the article is accepted for publication. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microfilm or any other reproductions of similar nature, and translations.

Permission to publish illustrations must be obtained by the author before submission and any acknowledgements should be included in the captions.

ON FRONT COVER: The cover image is of a group of volcanic seamounts on the continental slope of Australia south of Hobart, Tasmania. The image was produced by the Australian Geological Survey Organization (AGSO) using a multibeam sonar and illustrates the complexity of submarine topography that contributes to the diversity of marine ecosystems and biota. The area shown is about 2 500 km² and the seamounts are 200-600 m high with 20° slopes. The colour scale is in metres below sea level. There is a rich bottom fauna with many species identified by the CSIRO as new to science. The area is a rich fishing ground for Orange Roughy. Many of the deeper seamounts are part of the Tasmanian Seamounts Marine Protected Area. [copyright AGSO]
