The Parkes 2700 MHz survey (fourteenth part): Catalogue for declinations -4° to -15° , right ascensions 10^h to 15^h . *J. G. Bolton, Alan E. Wright and Ann Savage*

Abstract. A catalogue of 278 radio sources is presented from a 2700 MHz survey of 0.247 sr. The catalogue is essentially complete for sources with $S_{2700} \geq 0.25$ Jy, corresponding to a source density in this area of 820 sources per steradian. The catalogue includes the results of examination of the Palomar Sky Survey prints at the positions of the sources.
