Fig. S1.  (a) Body weights, (b) estrous cyclicity and (c) ovarian weights and (d) morphologies of the control rats and rats treated with insulin + hCG. (d1) The bilateral ovaries of a representative control rat; (d2) the bilateral ovaries of a representative rat treated with insulin + hCG; and (d3) the ovary of a representative rat treated with insulin + hCG (left) and the ovary of a representative control rat (right). The data are presented as the mean ± s.e.m. (*$P < 0.05$; **$P < 0.01$; ***$P < 0.001$). Each group had 10 rats.
