Reproduction, Fertility and Development

Supplementary Material

DNA methylation analysis using bisulphite-based amplicon sequencing of individuals exposed to maternal tobacco use during pregnancy, and offspring conduct problems in childhood and adolescence[†]

*Supplementary Table 2 - Top CpG sites found to be nominally significantly differentially methylated (unadjusted P < 0.05) in response to in utero tobacco exposure (Model 1). Asterisk, *, indicates CpG sites in genes identified as differentially*

methylated in response to adult smoking status (Supplementary Table 3).
 Abbreviations: FC, fold change; CPM, counts per million; FDR, FDR-corrected P
 value.
