THE CYBER SERVICE UNIT brings Schlumberger computing power to the well site for decision makers

SCHLUMBERGER INTRODUCES A NEW DOWNHOLE
DATA ACQUISITION SYSTEM BUILT AROUND A
COMPUTER:
THE CYBER SERVICE UNIT

By applying computer control to logging operations, Schlumberger well logging services provide a host of benefits to you. Among its many capabilities, CSU* provides quick-look formation evaluation at your wellsite.

CYBERLOOK is a computer model, easy to use, requiring a minimum of parameter selection and applicable to a wide range of formations. It is fast to run with outputs of grain size, porosity, fluid saturation and shale index, all answers you require from logs at the wellsite for making decisions on testing and completion of your well.

CYBERLOOK provides wellsite answers.

* Mark of Schlumberger.

TIDEWATER

PORT JACKSON MARINE PTY. LIMITED

10th Floor, 80 Alfred Street, Milsons Point. N.S.W. 2061
Telex: AA24685 Telephone: 929-7255

Servicing the Australasian off-shore oil exploration industry since 1968.

The Company owns a fleet of ten off-shore supply and anchor handling vessels, all built in Australia, ranging from 1700 horsepower for general supply work to 6000 horsepower ultra-modern, efficient anchor handling and towing/supply vessels and including the dynamic positioning R.C.V. support vessel 'Flinders Tide'.

Foreign flag vessels are also available from our partners Tidewater Inc. of New Orleans should no Australian flag ships be available.

Prospective Charterers may be assured of the best possible attention from an enthusiastic team fully conversant with Australasian maritime conditions. We look forward to your enquiries.

BAKER PRODUCTION SERVICES (AUSTRALIA) PTY. LTD.

Telex: 94374 MARFLEET

Services Available in Australia:

Hydraulic work-over or snubbing unit
Production testing service
Casing services
Wire line services

Subsidiary of Baker International Corporation, U.S.A.

GEARHART

MEASUREMENT WHILE DRILLING

A more reliable, efficient system for measuring directional drilling progress.

Measurement While Drilling gets its toughest tests on the THUMS islands off Long Beach, California. That is where Gearhart MWD systems are now in use.

Average well deviation from vertical at THUMS locations exceeds 50°, with buildup to 70° or 80° not at all uncommon, before dropping into the completion intervals.

Nearly 800 wells have been drilled in this field to date. Such well density demands the highest degree of accuracy and control to avoid intersection with adjacent wells and to obtain proper bottom-hole spacing.

Additional equipment is being fabricated to expand this highly technical service into other parts of the world as quickly as possible.

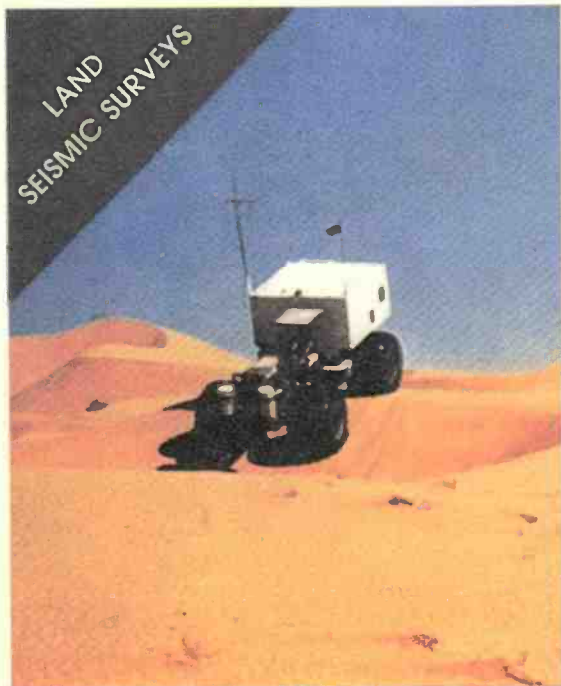

No other directional surveying system has the unique design features of Gearhart MWD. The combination of accuracy, time-savings, safety and economy is as unique as its compact design. Write today for the new Gearhart MWD brochure. For MWD... Call Gearhart First.
