

ANIMAL PRODUCTION SCIENCE

CONTENTS Volume 54, Issue 4, 2014, 363–518

CONTEXT

Foreword iii–v

Factors influencing the incidence of high rigor temperature in beef carcasses in Australia

R. D. Warner, F. R. Dunshea, D. Gutzke, J. Lau and G. Kearney 363–374

EFFECTS ON QUALITY

Influence of high pre-rigor temperature and fast pH fall on muscle proteins and meat quality – a review

Y. H. B. Kim, R. D. Warner and K. Rosenfold 375–395

A consumer sensory study of the influence of rigor temperature on eating quality and ageing potential of beef striploin and rump

R. D. Warner, J. M. Thompson, R. Polkinghorne, D. Gutzke and G. A. Kearney 396–406

The effect of pH decline rate on the meat and eating quality of beef carcasses

D. L. Hopkins, E. N. Ponnampalam, R. J. van de Ven and R. D. Warner 407–413

Impacts of hanging method and high pre-rigor temperature and duration on quality attributes of ovine muscles

Y. H. B. Kim, M. Kerr, G. Geesink and R. D. Warner 414–421

Improving beef meat colour scores at carcass grading

J. M. Hughes, G. Kearney and R. D. Warner 422–429

METABOLIC CAUSES AND ANIMAL INTERVENTIONS

Potential nutritional strategies for the amelioration or prevention of high rigor temperature in cattle – a review

K. DiGiacomo, B. J. Leury and F. R. Dunshea 430–443

Grain feeding increases core body temperature of beef cattle

R. H. Jacob, V. S. M. Surridge, D. T. Beatty, G. E. Gardner and R. D. Warner 444–449

Dietary betaine supplementation has energy-sparing effects in feedlot cattle during summer, particularly in those without access to shade

K. DiGiacomo, R. D. Warner, B. J. Leury, J. B. Gaughan and F. R. Dunshea 450–458

Relationship between changes in core body temperature in lambs and post-slaughter muscle glycogen content and dark-cutting

D. G. Pighin, W. Brown, D. M. Ferguson, A. D. Fisher and R. D. Warner 459–463

POST-MORTEM METABOLISM AND INDUSTRY SOLUTIONS

Regulation of post-mortem glycolysis in ruminant muscle

D. M. Ferguson and D. E. Gerrard 464–481

Techniques to reduce the temperature of beef muscle early in the post mortem period – a review

R. H. Jacob and D. L. Hopkins 482–493

Pre-rigor carcass stretching counteracts the negative effects of high rigor temperature on tenderness and water-holding capacity – using lamb muscles as a model

R. D. Warner, M. Kerr, Y. H. B. Kim and G. Geesink 494–503

A preliminary study into the use of ‘heat pipes’ to prevent high rigor temperature in beef carcasses by increasing cooling rate

R. H. Jacob, D. T. Beatty and R. D. Warner 504–509

OVERVIEW

Muscle metabolism in sheep and cattle in relation to high rigor temperature – overview and perspective

P. E. Strydom and K. Rosenfold 510–518
