Supplementary Table 2. Repeatability of gliadins in Neixiang 188 separated by RP-UPLC

Peaks*	Migration time (min)	RSD%	Peak height (1000 uV)	RSD%	Peak area (1000 uV/S)	RSD%
1	12.194±0.0064	0.0521	285.99±6.26	2.19	166.69±4.51	2.71
2	18.446±0.0017	0.0094	1943.21±554.72	2.86	520.03±15.31	2.94
3	20.932±0.0093	0.044	1001.57±144.04	1.44	311.90±8.66	2.78
4	23.529±0.0055	0.0498	1663.29±24.07	1.45	604.76±11.36	1.88
5	26.377±0.0158	0.0598	1488.97±45.48	3.05	782.28±14.47	1.85
6	27.287±0.160	0.0586	801.28±13.20	1.65	431.68±4.73	1.09
7	27.801±0.016	0.0547	229.76±4.78	2.08	155.45±2.67	1.72
8	29.058±0.1578	0.0543	202.38±4.24	2.10	112.62±2.35	2.01

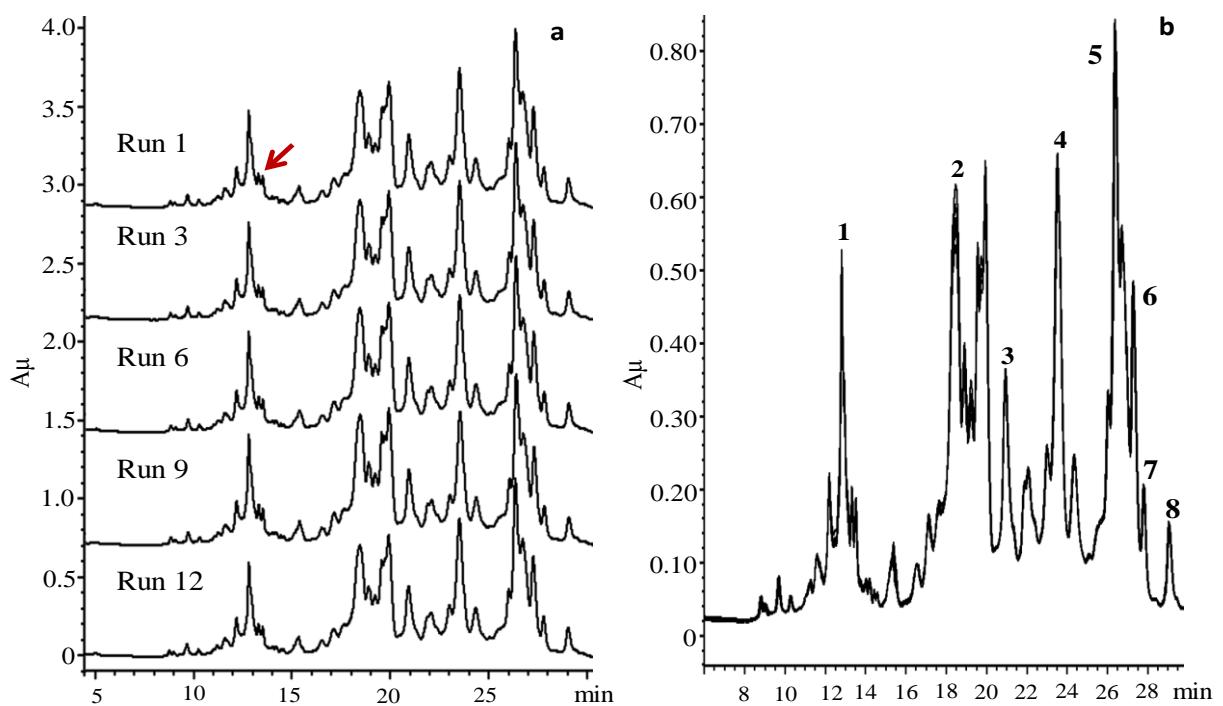

*Peak numbers are same as those indicated in Suppl. Fig. 3.

Supplementary Figure 1. Representative base peak chromatogram of gliadin band *a* and band *c* from A-PAGE separated by LC-MS/MS. Two peptides (R.PFGQQPEQIISQR.P and R.QLN PSEQELQSPQQPVPK.E) from gliadin band *a* and one peptide (R.QLN PSEQELQSPQQPVPK.E) from gliadin band *c* that are specific for omega secalins from 1BL.1RS translocation are indicated.

Supplementary Figure 2. Multiple alignment of the deduced amino acid sequences of 7 representative omega secalin genes cloned in this work (TaSec-NX-1, TaSec-NX-2, TaSec-NX-3, TaSec-JD-1, TaSec-JD-2, TaSec-JD-3 and CAA42836.1) with 5 previously characterized omega secalin genes from NCBI (ACQ83627.1, ACQ83633.1, ACQ83637.1, ACQ83641.1 and ACQ83629.1). The positions of 2 peptides specific for omega secalins corresponding to bands *a* and *c* identified by LC-MS/MS are shaded in blue color.

Supplementary Figure 3. Reproducibility of gliadins from wheat cultivar Neixiang 188 separated by RP-UPLC. a. 12 consecutive runs by optimized RP-UPLC; b. Overlap of 12 consecutive runs and 8 main gliadin peaks are indicated. The omega secalins from 1BL.1RS translocation are arrowed.
