<sup>1</sup> The symbol Acc#01 indicates the number assigned to the accession (1 in this case).

<sup>2</sup> For the accessions 28-41 is indicated not the Province but the city or the village of Cyprus.

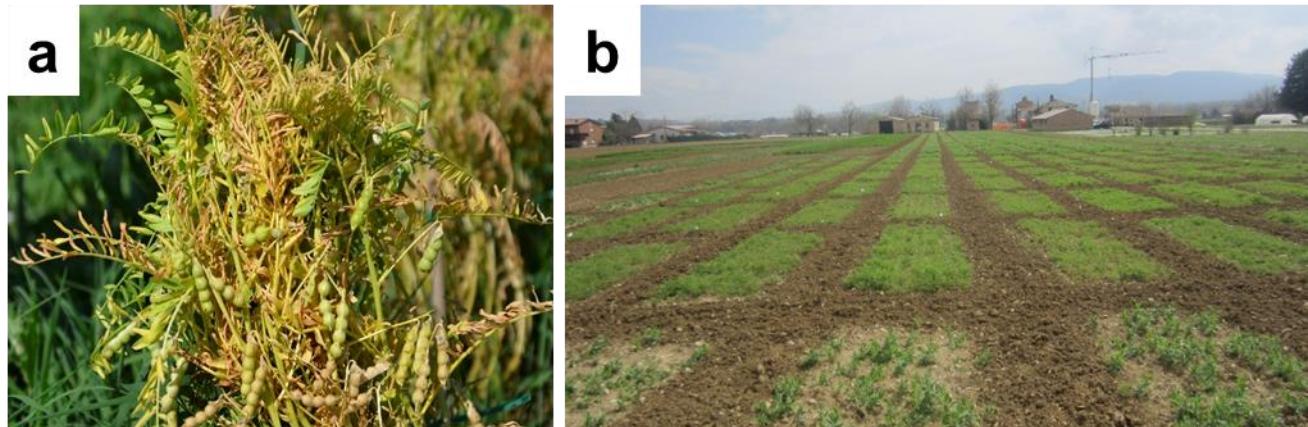

The accessions indicated in bold are those cultivated in the greenhouse in 2013 and 2014 and in the experimental field in 2014 and 2015. They were evaluated by both agro-morphological analysis and utilization tests of the seeds.

**Table S2. Feed digestibility and growth performance of rabbits**

	Experimental diets			s.e.m.	<i>P</i>
	Control	BV-low	BV-high		
<b>Feed digestibility (%)</b>					
Dry matter	65.57	66.43	66.49	0.56	0.479
Organic matter	66.55	67.53	67.55	0.59	0.442
Crude protein	79.02	80.25	78.99	0.97	0.653
Ether extract	82.45 <sup>a</sup>	80.86 <sup>ab</sup>	79.29 <sup>b</sup>	0.41	0.005
Ash	56.15	56.09	56.67	0.66	0.801
Neutral detergent fiber	30.29	33.83	33.43	0.76	0.052
Non-fiber carbohydrates	92.04	91.51	91.11	0.28	0.139
<b>Growth performance</b>					
Overall feed intake (g/day)	123.2	123.9	124.1	0.27	0.125
Overall feed conversion ratio	3.50	3.24	3.56	0.08	0.219
Final body weight (g)	2505.8	2644.4	2614.0	49.76	0.373

Means without a common superscript letter differ significantly.

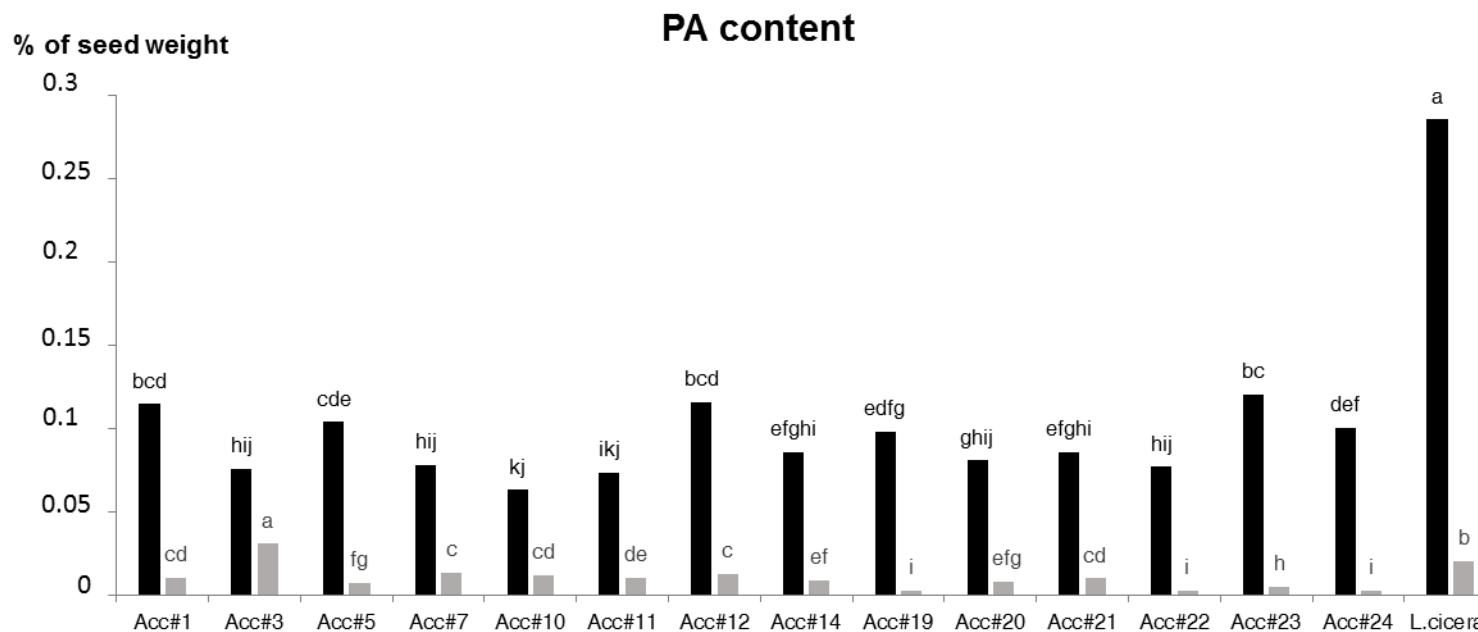

## Supplementary Figures

**Fig. S1.** Example of an experimental field for agronomical evaluation of *Vicia ervilia* L. (bitter vetch) accessions. a) A bitter vetch plant with green siliques. b) Bitter vetch plots organized as a randomized complete block design with three replicates. In the first line of plots from the bottom of the figure, there are plants of field pea.

**Fig. S2.** Example of the banding pattern obtained for the SSR locus VE7 by agarose gel electrophoresis. Arrows at left indicated the length in bp of the amplified amplicons. Lanes 1-6: 2 plants of Acc#34 (Acc#34.2 and Acc#34.1), 2 plants of Acc#33 (Acc#33.2 and Acc#33.1), and 2 plants of Acc#32 (Acc#32.2 and Acc#32.1). Lane 7: DNA molecular mass marker.

**Fig. S3.** Seed content (% of seed weight) of condensed tannins, also known as proanthocyanidins (PAs), in *V. ervilia* accessions. An example of 14 out of 22 accessions is shown. The PA content of the other 8 bitter vetch accession is similar to that shown in the figure. Left (black) columns, soluble PAs; right (grey) columns, insoluble PAs. Columns of the same side labelled with the same letter do not differ for  $P < 0.05$ . The name of the *V. ervilia* accessions is indicated on the x-axis. *L. cicera* seeds are used as positive control.
