3.2.3 Harvesting tree legumes 27
3.2.4 Wilting to improve forage intake 28

3.3 Making quality silage 28

3.4 The 10 steps to making silage 30
3.4.1 Harvest the forage 30
3.4.2 Wilt the forage to 30% DM 31
3.4.3 Add a fermentable substrate at ensiling 31
3.4.4 Chop the forage into short lengths 31
3.4.5 Compact the forage as tightly as possible 32
3.4.6 Complete the entire storage quickly 32
3.4.7 Seal storage airtight 32
3.4.8 Maintain airtight seal 33
3.4.9 Feed out a whole face of the storage 33
3.4.10 If silage is unsatisfactory, determine the reason 34

3.5 Storing wet by-products as silage 34

4 Young stock management 37
4.1 Rearing the milk-fed calf 39
4.1.1 Colostrum feeding 40
4.1.2 Early rumen development 40
4.2 A successful early weaning program 41
4.2.1 Weaning age 42
4.2.2 Concentrate quality 42
4.2.3 The high cost of milk rearing 42
4.3 Scours in milk-fed calves 43
4.3.1 What is scours? 44
4.3.2 Causes of nutritional scours 44
4.3.3 Treating scours 45
4.3.4 Preventing scours 46
4.4 Management of weaned replacement heifers 46
4.4.1 Fertility 47
4.4.2 Milk production 48
4.4.3 Heifer wastage 48
4.5 Targets for replacement heifers 48
4.5.1 Live weight 48
4.5.2 Wither height 48
4.5.3 Age of teeth eruption 49
4.5.4 Energy and protein requirements for heifers 49
4.5.5 Feeding heifers to achieve target live weights 49

5 The principles of dairy nutrition 51
5.1 Nutrients supplied by feeds 52
5.1.1 Describing feed energy 53
5.1.2 Describing feed protein 54
5.1.3 Describing feed fibre 54
5.2 Nutrients contained in feeds 54
5.3 Predicting cow performance from nutrient intakes 56
  5.3.1 Water 56
  5.3.2 Energy 58
  5.3.3 Protein 58
  5.3.4 Fibre 59
5.4 The lactation cycle 59
  5.4.1 From calving to peak lactation 60
  5.4.2 Peak lactation to peak intake 60
  5.4.3 Mid and late lactation 60
  5.4.4 Dry period 60
5.5 Proportion of productive cows in the milking herd 60

6 Feeding management of the milking herd 63
  6.1 How cows respond to supplements 64
    6.1.1 Deceasing marginal responses 64
    6.1.2 Immediate and delayed milk responses 67
    6.1.3 Guidelines for temperate grazing dairy systems 67
  6.2 Milk:concentrate ratios in production rations 67
  6.3 Problems with unbalanced diets 69
    6.3.1 Some indicators of unbalanced diets 69
    6.3.2 Metabolic disorders and unbalanced diets 69
    6.3.3 Lactic acidosis 70
    6.3.4 Feed toxicities 71
    6.3.5 Other feed additives 72
    6.3.6 Troubleshooting feeding problems 72
    6.3.7 Monitoring manure consistency 73
  6.4 Optimum stocking capacity 73

7 Disease prevention and control 75
  7.1 Physical attributes of healthy and sick cows 75
    7.1.1 Other tools to diagnose diseases 77
  7.2 Disease agents 78
    7.2.1 Parasites 78
    7.2.2 Microbial agents 78
    7.2.3 Nutritional and metabolic diseases 78
  7.3 Managing dairy herd health 78
    7.3.1 The importance of good record keeping 79
    7.3.2 Nursing and support 79
    7.3.3 Scours 80
    7.3.4 Responsible drug handling 80
    7.3.5 Biosecurity when purchasing new stock 81
    7.3.6 Animal and human health 82
# Health and reproductive performance

## Lameness

7.5.1 Assessing cow lameness

## Mastitis

7.6.1 Causes of mastitis
7.6.2 The importance of the teat
7.6.3 Environmental mastitis
7.6.4 Contagious mastitis
7.6.5 The dry period
7.6.6 California mastitis test (CMT)
7.6.7 The role of mastitis therapy
7.6.8 Lactation therapy
7.6.9 Dry cow therapy
7.6.10 Preventing mastitis
7.6.11 Recommended milking procedures
7.6.12 Recommendations for milking machines
7.6.13 Controlling mastitis
7.6.14 Heifers
7.6.15 Establishing goals

# Reproductive management

## Measures of reproductive performance

8.1.1 Collecting permanent records on each cow
8.1.2 The fertility timetable for the milking cow
8.1.3 Introducing 100 day-in-calf and 200 day-not-in-calf rates
8.1.4 Submission rates
8.1.5 Conception rates

## Non-nutritional factors affecting reproduction

8.2.1 Heat detection in tropical herds only using AI

## Nutritional influences on reproduction

8.3.1 Energy intakes and balance

## Implications for herd and feeding management

8.4.1 A simplified system for feeding management
8.4.2 Management in late lactation
8.4.3 Dry cow management
8.4.4 Management during the transition period
8.4.5 Protein intakes
8.4.6 Intakes of minerals
8.4.7 Herd management

## Putting it all together – a plan for success

8.5.1 Setting priorities to address fertility issues
8.5.2 Some important decisions to make
9  Genetics  
9.1  Problems with exotic genotypes  
9.1.1  Jerseys versus Friesians in the tropics  
9.1.2  Genotype by environment interactions  
9.2  Specially bred tropical dairy genotypes  
9.3  Breeding decisions to be made on the farm  

10  Managing stock surplus to the milking herd  
10.1  Cull cows  
10.2  Excess dairy stock  
10.3  Dairy beef  
10.4  Imported cows in lactation anoestrus  

11  Stock welfare  
11.1  The five basic freedoms of livestock  
11.2  The six basic elements of stock welfare  
11.2.1  Facilities and equipment  
11.2.2  Provision of feed and water  
11.2.3  Herd management  
11.2.4  Humane destruction  
11.2.5  Staff competency  
11.2.6  Preparation, selection, sale and transport of stock  
11.3  Other general principles of stock welfare  
11.3.1  Problems of confinement  
11.4  Australian welfare codes for calves  
11.4.1  Housing  
11.4.2  Feeding  
11.4.3  Management practices  
11.4.4  Transportation of calves  

12  Environmental management  
12.1  Heat stress in milking cows  
12.1.1  Symptoms of heat stress  
12.2  The Temperature Humidity Index  
12.2.1  Adverse effects of heat stress  
12.3  Management practices to minimise heat stress  
12.3.1  Clinical signs of heat stress  
12.3.2  Monitoring respiration rates  
12.3.3  Shed design  
12.3.4  Cooling cows  
12.3.5  Allowing cows outside overnight  
12.3.6  Feeding management
13 **Housing systems** 143

13.1 **Housing the milking herd** 144

13.1.1 Building for the cow 144
13.1.2 Location 145
13.1.3 Shed design 145
13.1.4 Tie stalls or loose housing? 145
13.1.5 Free stalls or open lounging? 146
13.1.6 Free stall layouts 147
13.1.7 Making the choice 148
13.1.8 Considerations in flooring 149

13.2 **Feeding the milking herd** 149

13.2.1 Water troughs 149
13.2.2 Feed troughs and feeding strips 150
13.2.3 Feed storage 150
13.2.4 Preparing concentrate mixtures 151

13.3 **Additional features of dairy shed design** 151

13.3.1 Additional health facilities 151
13.3.2 Housing for young stock 152
13.3.3 Calf cages 153
13.3.4 Outdoor area for night-time 153
13.3.5 Stock-handling facilities 153
13.3.6 Storage of veterinary drugs and other dairy equipment 154
13.3.7 Bull pen and mating yard 154
13.3.8 Farm office 154
13.3.9 Staff quarters 154

13.4 **Milk harvesting** 154

13.4.1 Designs of milking parlours 155
13.4.2 Milk room and cooler 156

13.5 **Sanitation and effluent management** 157

13.5.1 Effluent as a liability 157
13.5.2 Effluent disposal systems 158

13.6 **A checklist for planning dairy sheds** 158

14 **Milk harvesting and hygiene** 161

14.1 **Measures of milk composition and quality** 163

14.1.1 Milk composition 163
14.1.2 Milk quality 163

14.2 **The science of milk quality** 165

14.2.1 Factors influencing the growth of bacteria 165
14.2.2 The principles of cleaning and sanitising dairy equipment 165

14.3 **Management practices for good milking hygiene** 166

14.3.1 Health and personal hygiene 167
14.3.2 Environmental hygiene 168
14.3.3 Milking procedures and milk handling 170
