

ACKNOWLEDGEMENTS

The editors thank the Australasian Wildlife Management Society for supporting this out-of-season colloquium and for providing funds to initiate the planning process. Thanks also to the Royal Zoological Society and World Wildlife Fund Australia for supporting the colloquium, and to Taronga Zoo for providing the venue. The Invasive Animals Cooperative Research Centre and the Vertebrate Pest Research Unit of New South Wales Department of Primary Industries supported staff involvement in planning and coordination of the forum. Thanks to Stuart McMahon for his stellar effort in facilitating 2 days of deliberations and to his employer, New South Wales Office of Environment and Heritage, for permitting him to participate. We also acknowledge the Winston Churchill Memorial Trust for supporting Paul Meek's Fellowship where the idea of this colloquium was formulated.

We appreciated the effort and cost afforded by the companies who had camera trap trade displays at the colloquium; Outdoor Cameras, FAUNATECH, Wildlife Monitoring, and Professional Trapping Supplies.

We extend our gratitude to Doreen Culliver of OnQ Conferences for her tireless efforts in organis-

ing (and reorganising) the logistics that made the colloquium so enjoyable for all attending. Thanks to Francis Zewe and Dustin Welbourne for their logistical support throughout the colloquium and to Phil Redpath, Andrew Claridge, Rob Hunt, Ross Meggs and Don Swann for helping with preparing the venue; and to Tarnya Cox for running the photo competition.

We appreciate the efforts of all presenters, especially the authors and co-authors of these papers, for their time and effort in reviewing the scientific papers, thereby ensuring that the quality was of a high standard and that the book satisfied the editorial and CSIRO Publishing guidelines. Briana Melideo and the editorial team at CSIRO Publishing put the polish on our book and provided advice on its design and presentation. Finally, we acknowledge all attendees whose enthusiasm and contributions throughout the presentations and posters facilitated discussions, and breaks ensured the transfer of ideas and information and the overall success of the First International Camera Trapping Colloquium in Wildlife Management and Research.
