Dimethylsulfide (DMS), a climate-forcing gas, plays a significant role in particle and cloud formation in the marine atmosphere, where it is the dominant source of acidity. A biogeochemical coupling of the DMS flux and the ammonia flux from the ocean to the atmosphere has been previously suggested. This is discussed and revised in the Concept article by M. T. Johnson and T. G. Bell where they propose the concept of 'co-emission' of these two gases from seawater (see pp. 259–267).

Mercury (Hg) is a toxic, persistent pollutant that accumulates in the food chain. Anthropogenic sources are estimated to account for approximately one-third of atmospheric Hg. In the paper by N. D. Hutson and B. C. Attwood, Hg capture using bauxite residue (red mud) – a waste product from the aluminium industry – is evaluated and compared with other, more conventional sorbent materials (see pp. 281–288).

EDITORIAL

Environmental Chemistry: Already having an Impact

Alison Green

i

CONCEPT

Coupling between dimethylsulfide emissions and the ocean–atmosphere exchange of ammonia

M. T. Johnson and T. G. Bell

259

RESEARCH PAPERS

Modelling the impact of possible snowpack emissions of $O(^3P)$ and NO_2 on photochemistry in the South Pole boundary layer

P. D. Hamer, D. E. Shallcross, A. Yabushita and M. Kawasaki

268

Modelling copper uptake by *Saccostrea glomerata* with diffusive gradients in a thin film measurements

Mark A. Jordan, Peter R. Teasdale, Ryan J. K. Dunn and Shing Y. Lee

274

Binding of vapour-phase mercury (Hg^0) on chemically treated bauxite residues (red mud)

Nick D. Hutson and Brian C. Attwood

281

Trace metal cycling in the Whau Estuary, Auckland, New Zealand

Michael J. Ellwood, Peter Wilson, Kay Vöpel and Malcolm Green

289

Determination of the adsorption mechanism of imidazolium-type ionic liquids onto kaolinite: implications for their fate and transport in the soil environment

Wojciech Mrozek, Christian Jungnickel, Michał Skup, Piotr Urbaszek and Piotr Stepnowski

299

Assessing toxicity of mining effluents: equilibrium- and kinetics-based metal speciation and algal bioassay

Yamini Gopalapillai, Chuni L. Chakrabarti and David R. S. Lean
