

## Cover

On a global scale, soils store more carbon than plants or the atmosphere. The cycling of this vast reservoir of reduced carbon is closely tied to variations in environmental conditions, but robust predictions of climate–carbon cycle feedbacks are hampered by a lack of mechanistic knowledge regarding the sensitivity of organic matter decomposition to rising temperatures. See Kleber (pp. 320–332) for a critical discussion of the practice to conceptualise parts of soil organic matter as intrinsically resistant to decomposition or ‘recalcitrant’.

Manufactured nanoparticles can be released into the natural environment where they might pose a risk to environmental and human health. Understanding the nanoparticle characteristics that induce toxic effects that are not yet well-known, and the fate and behaviour of nanoparticles in the environment requires precise characterisation of their properties at the nanoscale and the individual particle level (see Baalousha et al., pp. 377–385).

## EDITORIAL

Recalcitrance – dead and buried?

*Kevin A. Francesconi and Jon Chorover*

319

## CONCEPT

What is recalcitrant soil organic matter?

*Markus Kleber*

320

## OPINIONS

Response to the Concept paper: ‘What is recalcitrant soil organic matter?’ by Markus Kleber

*Margit von Lützow and Ingrid Kögel-Knabner*

333

Response to the Opinion paper by Margit von Lützow and Ingrid Kögel-Knabner on ‘What is recalcitrant soil organic matter?’ by Markus Kleber

*Markus Kleber*

336

## RESEARCH PAPERS

Composition profile of oxygenated organic compounds and inorganic ions in PM<sub>2.5</sub> in Hong Kong

*Yun Chun Li and Jian Zhen Yu*

338

Field intercomparison on the determination of volatile and semivolatile polyfluorinated compounds in air

*Annekatriin Dreyer, Mahiba Shoeib, Stefan Fiedler, Jon Barber, Tom Harner, Karl-Werner Schramm, Kevin C. Jones and Ralf Ebinghaus*

350

Variations of aerosol properties due to regional source contributions and impacts on ozone levels: a study in a south China city

*Ka-Ming Wai and Peter A. Tanner*

359

Dissipation of sulfamethoxazole, trimethoprim and tylosin in a soil under aerobic and anoxic conditions

*Feng Liu, Guang-Guo Ying, Ji-Feng Yang, Li-Jun Zhou, Ran Tao, Li Wang, Li-Juan Zhang and Ping-An Peng*

370

Characterisation of structural and surface speciation of representative commercially available cerium oxide nanoparticles

*Mohammed Baalousha, Philippe Le Coustumer, Ian Jones and Jamie R. Lead*

377

Evidence for arsenic-driven redox chemistry in a wetland system: a field voltammetric study

*Laura Haffert, Sylvia G. Sander, Keith A. Hunter and Dave Craw*

386
