Immunisation and exposure management in four easy steps

Is too much of your time taken up with paperwork? Mavka Medical has created a database to help you work to government/OH & S guidelines and save time in the way you monitor health-care immunisation status and practise exposure management.

Curamon stores all the information you'll ever need.

- **Screening:** capture demographics, immunisation status for the essential infectious diseases – hepatitis B and C, HIV and a variety of other viral conditions.
- **Exposures:** record incident details, sharps used, exposure management, source status, plus serology and vaccination plans.
- **Follow-up:** Curamon will remind you when follow-up is required.
- **Statistics:** graphs are easy – incident by staff categories, sharp by procedure, and more.
- **User-friendly and secure:** help is available throughout Curamon and it is very easy to use, with a complete log-in procedure to ensure only authorised users view the database.

Best of all, information is only the click of a mouse away! No more leafing through a packed filing cabinet or 'phoning other departments to track down results from last year – Curamon can retrieve exposure details and results in seconds.

Contact Kaveri Stanley (bakaro@connexus.com.au) or Mark Smith (mjdsmith@ieee.org) on telephone (03) 9625 3554 for a free product demonstration. Do so in the next 30 days and you can trial it in your own setting before buying. We hope to hear from you soon. With Curamon you'll have more time for the important things, instead of chasing paper.

New Betadine® Product Monograph now available

Featuring a full description of: chemistry, clinical indications, precautions, adverse reactions and much more. Includes an update on wound healing effects.

Please complete the following request form and post to:
Faulding Pharmaceuticals – Woundcare, 2-10 Lexia Place, Mulgrave North Victoria 3170
