

### Supplementary Material

**Table S1. Characterisation of six nuclear microsatellite loci for the leafscale gulper (*Centrophorus squamosus*)**

$T_a$ , annealing temperature; A, total number of alleles scored per locus;  $H_O$ , overall observed heterozygosity;  $H_E$ , overall expected heterozygosity;  $P$ :  $P$ -value from Hardy-Weinberg equilibrium tests

Marker name	Repeat motif	$T_a$	A	$H_O$	$H_E$	$P$	GenBank accession number
