**Table S1. Percentages of land uses calculated within a 1-km diameter buffer around each sampling site**

Results are based on the analysis of the Corine Land Cover, provided by the cartographic services of the Regione Liguria (<http://www.cartografia.regione.liguria.it/>)

River	CLC nomenclature	CLC CODE	CLC description	Land use percentages
Arrestra	Agricultural areas	242	Complex cultivation patterns	2.68
		243	Land principally occupied by agriculture, with Land principally occupied by agriculture, with significant areas of natural vegetation	1.24
	Forest and semi natural areas	322	Moors and heathland	27.90
		323	Sclerophyllous vegetation	12.16
		324	Transitional woodland shrub	31.91
		3117	Hygrophilous forest	22.11
		5111	Streams and rivers with scarce riparian vegetation	1.99
	Water bodies	223	Olive groves	21.03
		242	Complex cultivation patterns	4.83
Quiliano	Agricultural areas	243	Land principally occupied by agriculture, with Land principally occupied by agriculture, with significant areas of natural vegetation	0.46
		2211	Vineyards and olive groves	5.08
		312	Coniferous forest	40.07
		323	Sclerophyllous vegetation	0.00
		3112	Mixed thermophilous forests	20.30
		3113	Mixed mesophilous forests	1.25
		3117	Hygrophilous forest	1.26
		1112	Continuous urban fabric with medium density	2.61
		5111	Streams and rivers with scarce riparian vegetation	0.35
		5114	Streams and rivers with abundant riparian vegetation	2.77
Sansobbia	Agricultural areas	223	Olive groves	5.24
		241	Annual crops associated with permanent crops	1.57
		242	Complex cultivation patterns	16.35
		243	Land principally occupied by agriculture, with Land principally occupied by agriculture, with significant areas of natural vegetation	0.77
		2211	Vineyards and olive groves	18.23
		312	Coniferous forest	21.46
		323	Sclerophyllous vegetation	0.36
		3112	Mixed thermophilous forests	13.24
		3113	Mixed mesophilous forests	5.51
		3115	Chestnut forest	0.69
		3117	Hygrophilous forest	2.95

River	CLC nomenclature	CLC CODE	CLC description	Land use percentages
Artificial surfaces	1111	Continuous and dense urban fabric		1.24
	1121	Discontinuous urban fabric with medium density		8.00
	1122	Discontinuous urban fabric with scarce density		0.87
Water bodies	5114	Streams and rivers with abundant riparian vegetation		3.51

**Table S2. Complete checklist of all the taxa detected in the samples**

CODE, taxon code from OMNIDIA database (ver. 6.0.4, see <http://omnidia.fr>). Red List column refers to conservation status defined by Lange-Bertalot and Steindorf (1996): 1, threatened with extinction; 2, severely endangered; 3, endangered; D, data scarce; G, probably endangered; R, rare; V, decreasing; \*, at present not considered threatened; \*\*, surely not threatened. Life forms and ecological guilds follow the classification proposed in Rimet and Bouchez (2012); for species not included in this list, we inferred data to the closest taxon in terms of taxonomy and ecology. In the final columns, we display the presence or absence of each taxon in the three rivers, and for each treatment.

C, control; BS, bare substrates; TS, transplanted substrates
