

## Cover

Shark nets have been set off the beaches of South Africa for more than 50 years to reduce the risk of shark attack, but they also act as fisheries-independent monitoring devices. In their article, Dudley and Simpfendorfer (p. 225) present catch information collected over 26 years from coastal KwaZulu–Natal, South Africa, and reveal evidence for declines in catch rates and mean length in some of the 14 commonly caught shark species. The potential effect of the nets varies with factors such as the life history traits of the species and the importance of other sources of shark catches.

Toxic blooms of the cyanobacterium *Lyngbya majuscula* have been occurring more frequently and with greater severity around the world. *Lyngbya* blooms cause oxygen depletion in the underlying sediments, affecting the abundance and distribution of meiofauna. Occurrence of the blooms has been linked to increased inputs of dissolved nutrients, particularly iron, and organic carbon from land-based sources. See articles by Garcia and Johnstone (p. 155) and Ahern *et al.* (p. 167 and p. 177).

## CONTENTS

- The effect of river regulation on floodplain wetland inundation, Murrumbidgee River, Australia  
*P. Frazier and K. Page* 133
- Age, growth, maturity, longevity and natural mortality of the shortfin mako shark (*Isurus oxyrinchus*) in New Zealand waters  
*S. D. H. Bishop, M. P. Francis, C. Duffy and J. C. Montgomery* 143
- Effects of *Lyngbya majuscula* (Cyanophyceae) blooms on sediment nutrients and meiofaunal assemblages in seagrass beds in Moreton Bay, Australia  
*R. Garcia and R. W. Johnstone* 155
- Effects of iron additions on filament growth and productivity of the cyanobacterium *Lyngbya majuscula*  
*K. S. Ahern, J. M. O'Neil, J. W. Udy and S. Albert* 167
- Investigating the potential for groundwater from different vegetation, soil and landuses to stimulate blooms of the cyanobacterium, *Lyngbya majuscula*, in coastal waters  
*K. S. Ahern, J. W. Udy and S. M. Pointon* 177
- Mortality of larval Murray cod (*Maccullochella peelii peelii*) and golden perch (*Macquaria ambigua*) associated with passage through two types of low-head weirs  
*L. J. Baumgartner, N. Reynoldson and D. M. Gilligan* 187
- Trophic relationships between itinerant fish and crab larvae in a temperate Australian saltmarsh  
*D. Mazumder, N. Saintilan and R. J. Williams* 193
- Intraspecific competition in a tropical stream shredder guild  
*L. Boyero and R. G. Pearson* 201
- Differential response of stream periphyton and invertebrate grazers to habitat modification by the emergent macrophyte *Justicia americana*  
*K. M. Fritz and J. W. Feminella* 207
- Demographic variation in the New Zealand abalone *Haliotis iris*  
*J. R. Naylor, N. L. Andrew and S. W. Kim* 215
- Population status of 14 shark species caught in the protective gillnets off KwaZulu–Natal beaches, South Africa, 1978–2003  
*S. F. J. Dudley and C. A. Simpfendorfer* 225
