The Parkes 2700 MHz survey (fifth part). Catalogue for the declination zone  $-35^{\circ}$  to  $-45^{\circ}$ . By J. G. Bolton and A. J. Shimmins

Abstract. A catalogue of 885 radio sources is presented, covering right ascensions  $10^{\rm h}$  to  $15^{\rm h}$  and  $19^{\rm h}$  to  $07^{\rm h}$  between declinations  $-35^{\circ}$  and  $-45^{\circ}$ . The catalogue is believed to be complete to 0.22 f.u. at 2700 MHz (940 sources per steradian) and the positions are accurate to  $\pm 15''$  arc in both coordinates for sources stronger than 0.3 f.u. Flux densities at 5009 MHz have been measured for 350 of the strong sources. Eighty-eight of the sources have been identified with galaxies and 39 have been identified and confirmed as quasi-stellar objects.
