

Australian Journal of Physics

Volume 36

Melbourne 1983

Australian Journal of Physics

A journal for the publication of results of original scientific research in pure and applied physics.

This journal is one of the Australian Journals of Scientific Research published by the Commonwealth Scientific and Industrial Research Organization with the co-operation of the Australian Academy of Science. Editorial policy for the journal series is developed by a Board of Standards appointed by CSIRO and the Australian Academy of Science.

Advisory Committee

Acceptance of papers for this journal is in the hands of an Advisory Committee appointed after consultation with the Board of Standards and the Australian Institute of Physics. All papers are refereed externally. Committee members advise editors on the selection of referees and adjudicate in the case of conflicting or adverse reports.

Chairman T. F. Smith, Monash University

Members L. T. Chadderton, Division of Chemical Physics, CSIRO
J. Graham, Division of Mineral Physics, CSIRO
C. A. Hurst, University of Adelaide
B. H. J. McKellar, University of Melbourne
D. B. Melrose, University of Sydney (AIP)
B. Y. Mills, University of Sydney
R. H. Spear, Australian National University
B. J. Walby (*Editor-in-Chief*)

Corresponding

Members R. H. Dalitz, University of Oxford
M. A. Morrison, University of Oklahoma

Editors

R. P. Robertson
B. J. Schmetzer

Issued six times a year

Annual subscription
\$A100 (surface)
\$A112 (airmail)
\$A30 (microfiche)

ISSN 0004-9506

The Notice to Authors is published in the first issue of each volume. Copies are available on request.

All inquiries and manuscripts should be forwarded to:

Editorial

Nuclear Physics

The $^{55}\text{Mn}(p, \gamma)^{56}\text{Fe}$ and $^{55}\text{Mn}(p, n)^{55}\text{Fe}$ cross sections. *L. W. Mitchell and D. G. Sargood* 1

Atomic and Molecular Physics and Spectroscopy

Excitation of swift heavy ions in foil targets: Visible radiation from Fe, Ni and Cu. *H. J. Hay, C. S. Newton and P. B. Treacy* 7

Thermal electron attachment to SF_6 and CFCl_3 . *R. W. Crompton and G. N. Haddad* 15

Drift and diffusion of electrons in an atomic gas between closely spaced electrodes. I. Theory for elastic electron-atom collisions. *D. R. A. McMahon* 27

Drift and diffusion of electrons in an atomic gas between closely spaced electrodes. II. Effect of inelastic collisions. *D. R. A. McMahon* 45

Relativistic corrections of closed-shell atomic systems. *R. Glass* 61

Fluid Dynamics and Plasma Physics

Some applications of transformation to the space-independent frame in the processes of strong radiation in plasmas. *S. N. Paul and B. Chakraborty* 67

Condensed Matter

Estimation of single crystal integrated X-ray intensity within a designated $(\Delta\omega, \Delta 2\theta)$ domain. *A. McL. Mathieson* 79

The room temperature elastic constants of caesium thiocyanate. *M. A. Irving, S. Praver, T. F. Smith and T. R. Finlayson* 85

Astronomy and Astrophysics

Coronal hole dynamics. *D. Summers* 93

Some properties of radio galaxies in clusters. *O. B. Slee, I. R. G. Wilson and Betty C. Siegman* 101

Volume 35 Number 6 was published on 2 February 1983

Australian Journal of Physics

Contents Volume 36 Number 2 1983

Particles and Fields

Generalized statistics and the rishon hypothesis. *P. D. Jarvis and H. S. Green* 123

Nuclear Physics

Nuclear orientation of ^{152}Eu in gold. *P. J. Blamey, D. Bingham, J. A. Barclay and J. D. Cashion* 127

An analytic distorted wave approximation for intermediate energy proton scattering. *F. Di Marzio and K. Amos* 135

Elastic scattering of heavy ions and the compressibility of nuclear matter. *K. A. Gridnev, E. F. Hefter, K. Mikulaš, V. M. Semjonov and V. B. Subbotin* 155

Atomic and Molecular Physics and Spectroscopy

The Boltzman equation theory of charged particle transport. *D. R. A. McMahon* 163

Condensed Matter

Elastic and inelastic scattering of gamma rays from V_3Si . *S. S. Ti, T. R. Finlayson, T. F. Smith, J. D. Cashion and P. E. Clark* 185

Applied Physics

Flow distribution in parallel connected manifolds for evacuated tubular solar collectors. *R. C. McPhedran, D. J. M. Mackey, D. R. McKenzie and R. E. Collins* 197

A lamp for cancer phototherapy. *F. Jacka and A. J. Blake* 221

Cosmic Rays

Comment on the cosmic ray energy spectrum in the light of results from atmospheric Cerenkov studies. *R. W. Clay, A. G. Gregory, P. R. Gerhardy and G. J. Thornton* 227

General Relativity and Gravitation

Counterpart of the Kasner model in Brans-Dicke theory. *V. B. Johri and G. K. Goswami* 235

Volume 36, Number 1, was published on 16 March 1983

Australian Journal of Physics

Contents Volume 36 Number 3A 1983

Review Article

The physics of low-energy electron-molecule collisions: A guide for the perplexed and the uninitiated. *Michael A. Morrison* 239

Atomic and Molecular Physics and Spectroscopy

L-shell ionization of Sn and Gd by 20–100 keV electron impact.
G. W. Baxter and B. M. Spicer 287

Drift velocity of electrons in nitrogen-argon mixtures. *G. N. Haddad* 297

Fluid Dynamics and Plasma Physics

The spatial Alfvén resonance in a collisional plasma. *I. J. Donnelly
and B. E. Clancy* 305

Condensed Matter

Effective Hamiltonians and wavefunctions for electrons in deformed crystals.
R. A. Brown 321

Dynamics of a nonlinear diatomic chain. *B. I. Henry and J. Oitmaa* 339

Cosmic Rays

Cosmic ray showers at 10^{16} eV. *R. W. Clay and P. R. Gerhardy* 357

Volume 36, Number 2, was published on 19 May 1983

Australian Journal of Physics

Contents Volume 36 Number 3B 1983

Astronomy and Astrophysics

Survey of OH masers at 1665 MHz. II. Galactic longitude 340° to the galactic centre. *J. L. Caswell and R. F. Haynes* 361

H₂O masers in the galactic plane. I. Longitude 340° to the galactic centre. *J. L. Caswell, R. A. Batchelor, J. R. Forster and K. J. Wellington* 401

Atlas of main-line OH masers in the galactic longitude range 3° to 60° . *J. L. Caswell and R. F. Haynes* 417

New H₂O masers associated with the main-line OH masers in the galactic longitude range 3° to 60° . *J. L. Caswell, R. A. Batchelor, J. R. Forster and K. J. Wellington* 443

Structure of a sequence of two zone polytropic stellar models with indices 0 and 1. *J. O. Murphy* 453

Volume 36, Number 2, was published on 19 May 1983

Australian Journal of Physics

Contents Volume 36 Number 4 1983

Nuclear Physics

Absolute cross sections of proton induced reactions on ^{65}Cu , ^{64}Ni and ^{63}Cu .
*M. E. Sevier, L. W. Mitchell, M. R. Anderson, C. I. W. Tingwell and
D. G. Sargood* 463

Atomic and Molecular Physics and Spectroscopy

Cross sections for electron-carbon monoxide collisions in the range 1–4 eV.
G. N. Haddad and H. B. Milloy 473

Determinantal representations for the crystallographic point groups.
K. J. Duff and E. H. Salib 485

Fluid Dynamics and Plasma Physics

Solenoidal excitation of eigenmodes in cylindrical magnetized plasma with two ion species. *T. D. Kieu and W. N-C. Sy* 491

Condensed Matter

The effect of lattice discreteness on the linewidth of the electron spin resonance of local moments in metals. *A. M. Stewart* 501

The Australian high resolution neutron powder diffractometer. *C. J. Howard, C. J. Ball, R. L. Davis and M. M. Elcombe* 507

Spin glasses in transition? *T. J. Hicks* 519

Transport properties of nearly magnetic alloys and metals. *A. B. Kaiser* 537

Structural transformations and their precursors. *T. R. Finlayson* 553

A fast-response EBIC system. *C. J. Rossouw, F. J. Maher and A. A. Panjov* 565

A simple microcomputer-controlled calorimeter: the heat capacity of copper, Invar and RbNiCl_3 in the range 2–20 K. *S. J. Collocott* 573

Astronomy and Astrophysics

Effect of excited states on thermonuclear reaction rates. *D. G. Sargood* 583

Volume 36, Number 3, was published on 25 July 1983

Contents

41X

Stuart Thomas Butler: A sketch of his life and work. *B. H. J. McKellar* (iii)

Particles and Fields

The quark presence in nuclei. *G. E. Brown* 591

A covariant and unitary equation for single quantum exchange. *H. Pierre Noyes and James V. Lindesay* 601

Formal scattering theory for energy-dependent potentials. *Bruce H. J. McKellar and Colette M. McKay* 607

The strangeness-exchange reaction $K^-d \rightarrow \Lambda p \pi^-$ in flight. *R. H. Dalitz and A. Deloff* 617

Nuclear Physics

Comparison of DWBA and adiabatic treatments of deuteron breakup angular correlations. *H. Amakawa and N. Austern* 633

Note on nuclear disintegration widths. *W. J. Swiatecki* 641

Isospin mixing in 4^- states of ^{12}C . *F. C. Barker* 649

Atomic and Molecular Physics and Spectroscopy

Electron impact excitation cross sections for B III. *P. S. Ganas, M. Aryafar and L. P. Gately* 659

Study of approximations for electron-atom direct reactions. *I. E. McCarthy and A. T. Stelbovics* 665

Fluid Dynamics and Plasma Physics

The excitation of ion-acoustic waves by a magnetic pump in cylindrical geometry. *N. F. Cramer and I. J. Donnelly* 675

Thermodynamics and Statistical Mechanics

Correlations, long range order and dimensionality. *M. J. Buckingham* 683

Electromagnetism and Optics

Power series expansion of the Mie scattering phase function. *Michael A. Box* 701

[continued overleaf]

AUJPAS 36(5) 591-753 (1983)

Biophysics

Remarks on the motility and thermotactic response of fibroblasts.

W. C. Parkinson 707

Cosmic Rays

An estimate of the flux of free quarks in high energy cosmic radiation.

C. B. A. McCusker 717

Astronomy and Astrophysics

Electron cyclotron maser emission near the cutoff frequencies. *R. G. Hewitt and*

D. B. Melrose 725

Free fall onto magnetized neutron stars. *E. E. Salpeter* 745

INTERNATIONAL SYSTEM OF UNITS

The *Système International d'Unités* (SI) was adopted by the eleventh General Conference on Weights and Measures and endorsed by the International Organization for Standardization in 1960. The system is an extension and refinement of the traditional metric system and is superior to any other in being completely coherent, rational and comprehensive. In the system there is one, and only one, unit for each physical quantity and the product or quotient of any two SI units yields the unit of the resulting quantity; no numerical factors are involved.

The seven base and two supplementary units on which the SI is based are listed in Table 1.

Table 1. Base and supplementary SI units

Quantity	Name of unit	Unit symbol
Length	metre	m
Mass	kilogram	kg
Time	second	s
Electric current	ampere	A
Thermodynamic temperature	kelvin	K
Luminous intensity	candela	cd
Amount of substance	mole	mol
Plane angle	radian	rad
Solid angle	steradian	sr

The base units are defined as follows:

Metre: The metre is the length equal to $1\,650\,763\cdot73$ (exactly) wavelengths in a vacuum of the radiation corresponding to the transition between the energy levels $2p_{10}$ and $5d_5$ of the pure nuclide ^{86}Kr .

Kilogram: The kilogram is the mass of the International Prototype Kilogram which is in the custody of the Bureau International des Poids et Mesures at Sèvres, France.

Second: The second is the duration of $9\,192\,631\,770$ periods of the radiation corresponding to the transition between the two hyperfine levels ($F = 4$, $M_F = 0$ and $F = 3$, $M_F = 0$) of the ground state of the atom of pure ^{133}Cs .

Ampere: The ampere is that constant current which, if maintained in two parallel rectilinear conductors, of infinite length and of negligible circular cross-section, at a distance apart of 1 metre in a vacuum, would produce a force between the conductors equal to 2×10^{-7} newton per metre of length.

Kelvin: The kelvin is completely defined by the decision of the 1954 *Conférence Générale* to assign the value $273\cdot16$ kelvin (exactly) to the thermodynamic temperature at the triple point of water. It is $1/273\cdot16$ of the thermodynamic temperature of the triple point of water.

Candela: The candela is the luminous intensity, in a given direction, of a source emitting monochromatic radiation of frequency 540×10^{12} Hz and the radiant intensity of which in that direction is $1/683$ watt per steradian.

Mole: The mole is the amount of substance of a system which contains as many elementary units as there are carbon atoms in $0\cdot012$ kg (exactly) of the pure nuclide ^{12}C . The elementary unit must be specified and may be an atom, a molecule, an ion, an electron, a photon, etc., or a specified group of such entities.

All the other necessary units can be derived from these base units. Tables 2 and 3 list some of the derived units.

Table 2. Derived SI units with special names

Physical quantity	Name of unit	Symbol for unit	Definition of unit
Energy	joule	J	$\text{kg m}^2 \text{s}^{-2}$
Force	newton	N	$\text{kg m s}^{-2} = \text{J m}^{-1}$
Pressure	pascal	Pa	$\text{kg m}^{-1} \text{s}^{-2} = \text{N m}^{-2}$
Power	watt	W	$\text{kg m}^2 \text{s}^{-3} = \text{J s}^{-1}$
Electric charge	coulomb	C	A s
Electric potential difference	volt	V	$\text{kg m}^2 \text{s}^{-3} \text{A}^{-1} = \text{J A}^{-1} \text{s}^{-1}$
Electric resistance	ohm	Ω	$\text{kg m}^2 \text{s}^{-3} \text{A}^{-2} = \text{V A}^{-1}$
Electric conductance	siemens	S	$\text{kg}^{-1} \text{m}^{-2} \text{s}^3 \text{A}^2 = \Omega^{-1}$
Electric capacitance	farad	F	$\text{A}^2 \text{s}^4 \text{kg}^{-1} \text{m}^{-2} = \text{A s V}^{-1}$
Magnetic flux	weber	Wb	$\text{kg m}^2 \text{s}^{-2} \text{A}^{-1} = \text{V s}$
Inductance	henry	H	$\text{kg m}^2 \text{s}^{-2} \text{A}^{-2} = \text{V s A}^{-1}$
Magnetic flux density	tesla	T	$\text{kg s}^{-2} \text{A}^{-1} = \text{V s m}^{-2}$
Luminous flux	lumen	lm	cd sr
Illumination	lux	lx	cd sr m ⁻²
Frequency	hertz	Hz	s ⁻¹
Activity (radioactive)	becquerel	Bq	s ⁻¹
Absorbed dose (radiation)	gray	Gy	J kg ⁻¹
Equivalent dose	sievert	Sv	J kg ⁻¹

Table 3. Other derived SI units

Physical quantity	SI unit	Symbol
Area	square metre	m ²
Volume	cubic metre	m ³
Density	kilogram per cubic metre	kg m ⁻³
Velocity	metre per second	m s ⁻¹
Angular velocity	radian per second	rad s ⁻¹
Acceleration	metre per second squared	m s ⁻²
Kinematic viscosity	square metre per second	m ² s ⁻¹
Dynamic viscosity	pascal second	Pa s
Electric field strength	volt per metre	V m ⁻¹
Magnetic field strength	ampere per metre	A m ⁻¹
Luminance	candela per square metre	cd m ⁻²
Heat capacity	joule per kelvin	J K ⁻¹
Thermal conductivity	watt per metre kelvin	W m ⁻¹ K ⁻¹
Surface tension	newton per metre	N m ⁻¹
Thermal coefficient of expansion	reciprocal kelvin	K ⁻¹

Some of the SI units are of inconvenient size, but the prefixes listed in Table 4 may be used to indicate fractions or multiples of the base or derived units.

Table 4. Prefixes for SI units

Fraction	Prefix	Symbol	Multiple	Prefix	Symbol
10^{-1}	deci	d	10	deca	da
10^{-2}	centi	c	10^2	hecto	h
10^{-3}	milli	m	10^3	kilo	k
10^{-6}	micro	μ	10^6	mega	M
10^{-9}	nano	n	10^9	giga	G
10^{-12}	pico	p	10^{12}	tera	T
10^{-15}	femto	f	10^{15}	peta	P
10^{-18}	atto	a	10^{18}	exa	E

Also, there are a number of familiar units which differ from the corresponding SI units only by powers of ten. They are not part of SI but will probably continue in use for some time. The list of such units in Table 5 is not exhaustive.

Table 5. Named units which are decimal fractions or multiples of SI units

Physical quantity	Name	Symbol	Definition
Length	ångström	Å	10^{-10} m
Length	micron	μm	10^{-6} m
Area	hectare	ha	10^4 m ²
Volume	litre	l	10^{-3} m ³
Mass	tonne	t	10^3 kg
Force	dyne	dyn	10^{-5} N
Pressure	bar	bar	10^5 Pa
Energy	erg	erg	10^{-7} J
Kinematic viscosity	stokes	St	10^{-4} m ² s ⁻¹
Dynamic viscosity	poise	P	10^{-1} Pa s
Magnetic flux	maxwell	Mx	10^{-8} Wb
Magnetic flux density (magnetic induction)	gauss	G	10^{-4} T
Absorbed dose (radiation)	rad	rad	10^{-2} Gy

Table 6 lists a number of other units which are not part of SI and defines them exactly in terms of the base SI units. *Their use is to be discouraged.*

Table 6. Some common units defined exactly in terms of SI units

Physical quantity	Name	Symbol	Definition
Length	inch	in	$2.54 \times 10^{-2} \text{ m}$
Area	acre	ac	$4\,046.856\,422\,4 \text{ m}^2$
Mass	pound (avoirdupois)	lb	$0.453\,592\,37 \text{ kg}$
Force	kilogram-force	kgf	$9.806\,65 \text{ N}$
Pressure	atmosphere	atm	$101\,325 \text{ Pa}$
Pressure	torr	Torr	$(101\,325/760) \text{ Pa}$
Pressure	conventional millimetre of mercury	mmHg	$13.595\,1 \times 980.665 \times 10^{-1} \text{ Pa}$
Energy	kilowatt-hour	kW h	$3.6 \times 10^6 \text{ J}$
Energy	thermochemical calorie	cal (thermochem.)	4.184 J
Energy	international table calorie	cal _{IT}	$34.186\,8 \text{ J}$
Activity	curie	Ci	$3.7 \times 10^{10} \text{ Bq}$

Australian Journal of Physics

EDITORIAL

The warning 'publish or perish' applies equally well to a scientific journal as to a research scientist. Consequently, both the journal and the scientist are faced with the temptation to compromise standards under the pressure to publish. In spite of the difficulties that the *Australian Journal of Physics* has experienced in recent years, there has been a steadfast determination to maintain the Journal's established position as an international medium for the publication of pure and applied physics.

During 1982, 124 papers were submitted to the Journal, an encouraging increase on the 87 papers submitted in 1981. The rejection rate in 1982 was 33%, a figure much lower than in previous years and one that indicates an improvement in the overall quality of papers submitted. Referees in the United States, Canada, the United Kingdom, West Germany, Italy, Denmark, Japan and New Zealand were used for about one-third of the papers submitted. It is with pleasure that we thank all those who acted as referees and advisers during the year.

Over the past year the average publication time for papers has been 7 months. The average time taken for the acceptance of papers is at present slightly under 3 months, with slightly more than 4 months for production. Every effort will be made in the future to shorten the publication time of papers, while at the same time maintaining the Journal's high standards of quality. Authors can assist in keeping publication times to a minimum by adhering to the instructions in the Notice to Authors when preparing their manuscripts. Similarly, referees are reminded to return manuscripts to the Editorial Office immediately, preferably with the names of alternative referees, if they are unable to furnish their report within the allotted time.

By recognizing the need to adapt the Journal to cater for the changing needs of the physics community a number of new features will be introduced in 1983, designed to both broaden the outlook and increase the standing of the Journal. In addition to the usual research papers and short communications, several *review articles* will be published each year. While it is intended that these reviews will be primarily directed at developments in physics which have taken place largely in Australia, this is not to be seen as a limitation on their nature or scope. Review articles will normally be invited, but authors interested in publishing a review in the Journal are welcome to contact and discuss the matter with an appropriate member of the Advisory Committee.

Another new feature in 1983 will be the addition of *Corresponding Members* to the Advisory Committee of the Journal. The Corresponding Members are to be distinguished overseas physicists who will serve as influential spokesmen for the Journal, as well as recommend suitable referees and adjudicate in the case of controversial papers in fields of physics not already covered by other members of the Advisory Committee.

Towards the end of 1983 the Journal proposes to publish a *special issue*, consisting of a group of papers by colleagues of the late Stuart Butler. In addition, the Journal will continue to publish papers given by keynote speakers at major physics conferences held in Australia. Conference organizers interested in publishing conference papers are encouraged to contact the Editor or the Chairman of the Advisory Committee at the earliest possible opportunity.
