**Fig. S1.** Annexin V and SYTOX green staining of HTR-8/Svneo cells following LIF stimulation in the presence or absence of U0126. HTR-8/SVneo cells were stimulated with LIF for 12 and 48 h following pre-treatment for 2 h with or without U0126. Cells were stained with both PE-Annexin V and SYTOX green as described in *Materials and methods*. The data is expressed as contour diagram where, Annexin V negative and SYTOX negative are healthy cells; Annexin V positive and SYTOX negative are apoptotic cells, Annexin V negative and SYTOX positive are necrotic cells while, Annexin V positive and SYTOX positive cells are at the late stages of apoptosis.
