## Part 1  Camera trapping for animal monitoring: case studies 1

1. Camera trapping for animal monitoring and management: a review of applications 3  
   Don E. Swann and Nic Perkins

2. Camera trap monitoring for inventory and management effectiveness in Victorian national parks: tailoring approaches to suit specific questions 13  
   Mark J. Antos and Kally Yuen

3. Sentinel camera traps monitor the emergence of infectious disease in Tasmanian devils (*Sarcophilus harrisii*) 27  
   Sam Thalmann, Phil Wise and Stewart Huxtable

4. What can camera traps tell us about the diurnal activity of the nocturnal bare-nosed wombat (*Vombatus ursinus*)? 35  
   Georgeanna Story, Don Driscoll and Sam Banks

5. The Wildlife Picture Index: monitoring Mongolian biodiversity with camera trapping 45  
   Susan E. Townsend, Batbayar Galtbalt, Munkhjargal Myagmar, Jonathan Baillie and Timothy G. O’Brien

6. Examining the state of biodiversity using camera traps in the Pacaya Samiria National Reserve, Peru 53  
   Malini Pittet and Peter Bennett

7. Population estimates of an endangered rock-wallaby (*Petrogale penicillata*) using time-lapse photography from camera traps 61  
   Catie Gowen and Karl Vernes
8 Fauna survey by camera trapping in the Torricelli Mountain Range, Papua New Guinea 69
Jim Thomas

9 Monitoring malleefowls with camera traps in Western Australia’s Wheatbelt: a case study in citizen science 77
Mike Griffiths and Phil Lewis

10 Wildlife camera trapping in the Himalayan kingdom of Bhutan with recommendations for the future 87
Tiger Sangay, Rajanathan Rajaratnam and Karl Vernes

**Part 2**  Camera technology, constraints and pitfalls 99

11 A review of the ultimate camera trap for wildlife research and monitoring 101
Paul D. Meek and Andre Pittet

12 The effect of camera trap type on the probability of detecting different size classes of Australian mammals 111
Jake Urlus, Clare McCutcheon, Daniel Gilmore and Jamie McMahon

13 Comparing the effectiveness of two types of camera trap for surveying ground-dwelling mammals 123
Matthew Swan, Julian Di Stefano and Fiona Christie

14 Using camera traps to compare poison bait uptake by invasive predators and non-target species 131
Katherine E. Moseby and John L. Read

Colour plates 141

15 Can camera trap surveys provide reliable population estimates for nondescript species? 173
Shannon J. Dundas, Peter J. Adams and Patricia A. Fleming

16 More than just presence–absence: camera traps reveal fine scale resource partitioning by the ubiquitous swamp wallaby (*Wallabia bicolor*) 181
Bronwyn A. Hradsky

17 Camera traps, sand plots and known events: what do camera traps miss? 189
Guy Ballard, Paul D. Meek, Sam Doak, Peter J. S. Fleming and Jessica Sparkes

**Part 3**  Survey design 203
18 How long is a piece of string? Camera trapping methodology is question dependent
   Andrew W. Claridge and David J. Paull

19 A novel camera-based approach to understanding the foraging behaviour of mycophagous mammals
   Karl Vernes, Matt Smith and Peter J. Jarman

20 Using camera traps to survey diurnal terrestrial reptiles: a proof of concept
   Dustin Welbourne

21 The use of camera traps to detect arboreal mammals: lessons from targeted surveys for the cryptic Leadbeater’s possum (Gymnobelideus leadbeateri)
   Dan K. P. Harley, Greg J. Holland, Bronwyn A. Hradsky and Joanne S. Antrobus

22 Using camera traps to monitor use of roadside glide poles and rope canopy-bridges by Australian gliding mammals
   Brendan Taylor and Ross Goldingay

23 Comparison of camera trapping and live trapping of mammals in Tasmanian coastal woodland and heathland
   Michael M. Driessen and Peter J. Jarman

24 TEAM: a standardised camera trap survey to monitor terrestrial vertebrate communities in tropical forests
   Patrick A. Jansen, Jorge A. Ahumada, Eric Fegraus and Timothy O’Brien

25 Developing a camera trap survey protocol to detect a rare marsupial carnivore, the spotted-tailed quoll (Dasyurus maculatus)
   Jenny L. Nelson, Michael P. Scroggie and Chris A. Belcher

Part 4 Data management and analyses

26 Automatic camera trap data organisation, storage and analysis without entering data by hand using a keyboard
   Jim Sanderson and Grant Harris

27 Assessing the power to detect change in red fox (Vulpes vulpes) occupancy using camera surveys in the Grampians National Park
   Alan Robley, Paul Moloney, Ben Holmes, Mike Castle, Ryan Duffy and Dave Panther

28 Computer-assisted identification of small Australian mammals in camera trap imagery
   Greg Falzon, Paul D. Meek and Karl Vernes
29 Can camera traps be used to estimate small mammal population size?  
Malith K. Weerakoon, Lise Ruffino, Grainne P. Cleary, Steven Heavener, Jenna P. Bytheway,  
Helen M. Smith and Peter B. Banks

30 Density estimation using camera trap surveys: the random encounter model  
J. Marcus Rowcliffe, Chris Carbone, Roland Kays, Bart Kranstauber and Patrick A. Jansen

31 Analysis of camera trap surveys to detect effects of population management  
Andrew Bengsen

32 Now we can ‘see the forest and the trees, too’, but there are risks: camera  
trapping and privacy law in Australia  
Paul D. Meek and Des Butler

Part 5 Conclusion

33 Putting contemporary camera trapping in focus  
Paul D. Meek, Peter J. S. Fleming, Guy Ballard, Peter B. Banks, Andrew W. Claridge,  
Stuart McMahon, Jim Sanderson and Don E. Swann
