Table S1: Museum identification details, GenBank accession numbers and locality data for all samples analysed in the present study. If no accession number is given the sample was not included in the analyses for that particular gene. Asterisks (*) indicate a sample was included in the microsatellite analyses. Co-ordinates refer to the broader sampling locality in which an individual was captured.

			GenBank Accession Numbers					Locality Co-ordinates

#Next generation sequencing was conducted on this sample to aid in identifying candidate regions for microsatellite analysis.

Table S2: Matrices of uncorrected pairwise p-distances between all unique CytB haplotypes (a) and unique D-loop haplotypes (b). In both matrices, p-distances are shown on the bottom of the matrix and standard error above.
