Beyond pushbutton processing.

With today's high-powered hardware and rapidly advancing software, it's easy to assume that computers can solve any problem. But when it comes to processing seismic data from areas with difficult weathering or other near-surface problems, pushbutton processing isn't enough. It takes skill and judgment to get the most from difficult data, even with the most powerful computer techniques.

At Hosking Geophysical, experienced geophysicists and programmers practice a special type of seismic craftsmanship. They combine our unique manual statics techniques with the computing power of our VAX 11/780 computer to obtain optimum results from the toughest data.

To find out how our unique approach to seismic processing can help you get the most from your exploration dollars, contact Hosking Geophysical Corporation.

10th Floor, 80 Alfred Street, Milsons Point. N.S.W. 2061
Telex: AA24685
Telephone: 929-7255

Servicing the Australasian off-shore oil exploration industry since 1968.
The Company owns a fleet of twelve off-shore supply and anchor handling vessels, all built in Australia, ranging from 1700 horsepower for general supply work to 6000 horsepower ultra-modern, efficient anchor handling and towing/supply vessels and including the dynamic positioning R.C.V. support vessel 'Flinders Tide'.

Foreign flag vessels are also available from our partners Tidewater Inc. of New Orleans should no Australian flag ships be available.
Prospective Charterers may be assured of the best possible attention from an enthusiastic team fully conversant with Australasian maritime conditions.

We look forward to your enquiries.
Seismic surveys in Australia

Seismograph Service Ltd have operated seismic surveys in Australia for nearly 4 decades. Today SSL Australia headquarters are located in a modern office block in Adelaide. SSL's services available to the Australian Oil Industry include newly equipped Vibroseis® crews, data processing through the new VAX based hardware and well velocity and VSP surveys with VAX processing in Adelaide.
