Table S1. Least square mean proportion (g/100g total fatty acids) of the total fatty acids in *longissimus thoracis et lumborum* of pasture-fed lambs or lambs fed three different diets (100% Silage (S); 50% S: 50% Concentrate (SC); 100% Concentrate (C)) for three feeding durations (36, 54, 72 days) pre-slaughter.

^{a,b,c} Within diet, means bearing different letters were significantly different due to feeding duration (36 vs 54 vs 72 days) ($P < 0.05$).

^{x,y,z} Within feeding duration, means bearing different letters were significantly different due to diet (S vs SC vs C) ($P < 0.05$).

^{A,B} Means bearing different letters were significantly different from Pasture treatment (obtained using Bonferroni adjustment) ($P < 0.05$).
