Volume 62 Issue 4 2022

Perspectives on Animal Biosciences

- Fleece rot and dermatophilosis (lumpy wool) in sheep: opportunities and challenges for new vaccines
Stuart Denman, Ross Tellam, Tony Vuocolo, Aaron Ingham, Gene Wijffels, Peter James and Ian Colditz 301–320

Metabolism and Microbiota

- Effects of faecal microbiota transplantation on the growth performance, intestinal microbiota, jejunum morphology and immune function of laying-type chicks
Jing Yu, Yujie Zhou, Qiongyi Wen, Baolin Wang, Haizhou Gong, Lingyu Zhu, Hainan Lan, Bin Wu, Wuying Lang, Xin Zheng and Min Wu 321–332

Feed Quality and Nutritional Value

- Cassava pulp can be nutritionally improved by yeast and various crude protein levels fed to cattle
Thitima Norrapoke, Tanitpan Pongjornmit and Sineenart Polyorach 333–341

Nutrition and Meat Quality

- Effects of methionine as free amino acid and dipeptide on productive efficiency and meat quality of broilers under acute and chronic heat stress
Fabiana Cristina Belchior de Sousa, Ana Paula Del Vesco, Vittor Zancanela, Thais Pacheco Santana, Angélica de Souza Khatlab, Víctor Emanuel Meneses Feitosa, Claudson Oliveira Brito, Leandro Teixeira Barbosa and Eliane Gasparino 342–357
- Dietary inclusion of purified crude glycerin improves bodyweight at slaughter and affects the fatty acid profile of lamb meat
Rebeca Dantas Xavier Ribeiro, Ronaldo Lopes Oliveira, Gleidson Giordano Pinto de Carvalho, Thadeu Marinello Silva, Jonival Barreto Costa, Vinicius da Silva Oliveira, Lisiane Santos Freitas, Claudio Vaz Di Mambro Ribeiro and Leilson Rocha Bezerra 358–367
- A comparison of meat composition, tenderness and the fatty acid profile of three muscles from Holstein-Friesian bulls from production system resulting in final ages of either <16 or 19 months
Y. Nian, A. P. Moloney, C. Li, P. Allen, S. M. Harrison, R. Prendiville, J. P. Kerry and G. Zhou 368–380

Production Systems, Environment and Management

- Are there opportunities to improve lamb feedlot production efficiency? A cross-sectional survey
T. P. Keogh, S. R. McGrath, V. H. Oddy, M. Hernandez-Jover, H. Dickson and M. B. Allworth 381–391
- Growth of young cattle grazing high-moisture winter forages in a temperate environment was not affected by access to drinking water
G. Banchemo, J. Clariget, A. La Manna, L. J. Watt, J. T. B. Milton, E. Fernandez, R. Zarza, F. Baldi and D. T. Thomas 392–400
