3 <sup>1</sup>Rainfall data for the sites were sourced from the Australian Bureau of Meteorology (<http://www.bom.gov.au/>) and were supplemented for Belfrayden and  
 4 Beckon using rainfall data collected near these sites during the experiments.

**Supplementary Table 3. Parameters (and standard error) derived by fitting a Mitscherlich response ( $y = A+B^*R^c$ , where  $y$  is herbage yield (kg dry matter/ha) and  $c$  is the Colwell soil test phosphorus (P) concentration (0-10 cm, mg/kg soil)) to data for each pasture variety grown at each site in each year)**

Maximum yield is predicted by A, the asymptote; responsiveness to P is reflected in R, the curvature parameter; and the intercept at a theoretical Colwell P value of zero is A+B. The Mitscherlich function was fitted using Genstat (Version 16)
