SI 1: Stability of GCMS signals of AsHCs and TPA. Peak areas of quantifier (m/z 106 for AsHCs and m/z 152 for TPA)	2
SI 2: Calibration plots of AsHCs and TPA with single ion monitoring in a concentration range of 1-500 µg As·L ⁻¹	5
SI 3: Calibration plots of AsHCs and TPA with multiple reaction monitoring (MRM) in a concentration range of 1-500 µg As·L ⁻¹	7
SI 4: Normalized ratios of fragments under three different MS conditions.....	8
SI 5: MS spectra of AsHCs and TPA under three different MS conditions. Spectra were recorded with solutions containing 500 µg·L ⁻¹ of each species.	9

SI 1: Stability of GCMS signals of standard solutions AsHCs and TPA ($500 \mu\text{g As}\cdot\text{L}^{-1}$ each). Peak areas of quantifier ($\text{m/z } 106$ for AsHCs and $\text{m/z } 152$ for TPA)

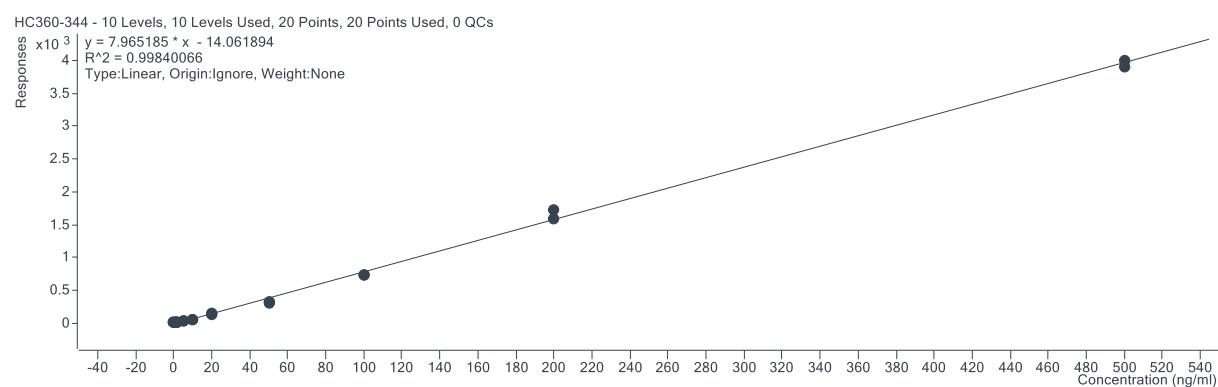

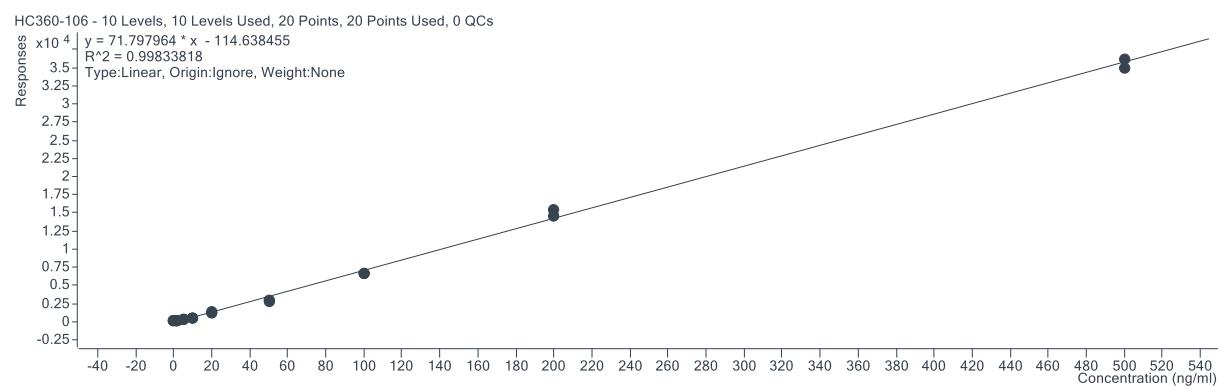

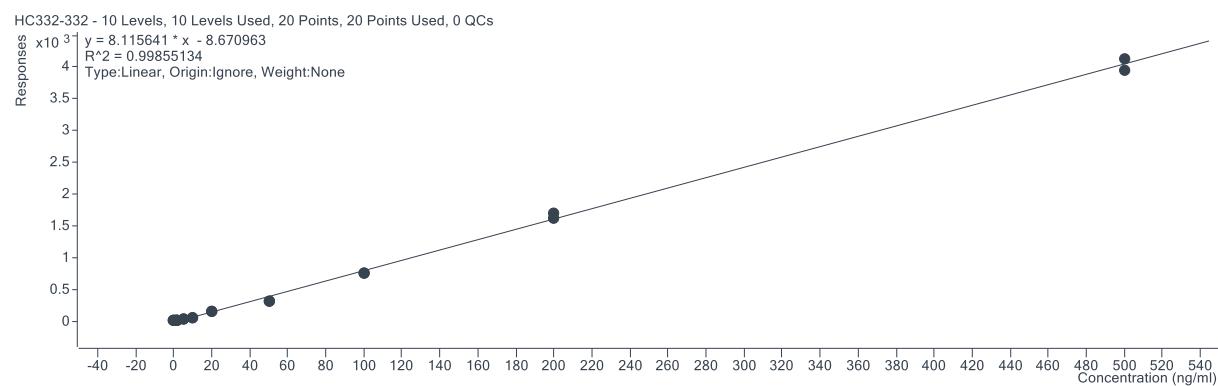

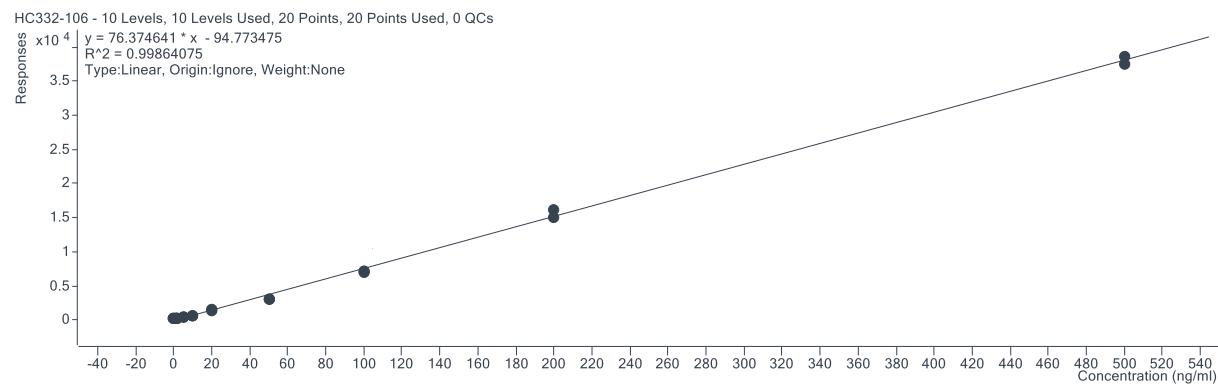

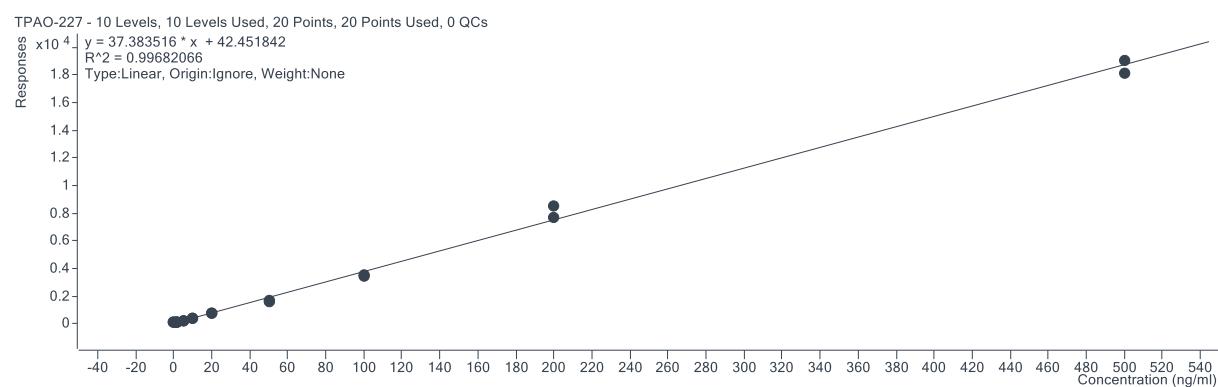

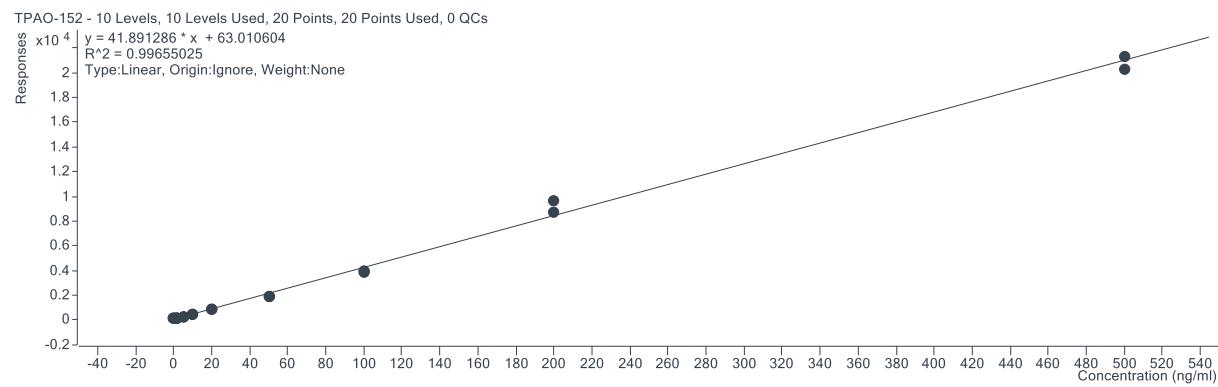

SI 2: Calibration plots of AsHCs and TPA with single ion monitoring in a concentration range of 1-500 $\mu\text{g As}\cdot\text{L}^{-1}$

MRM

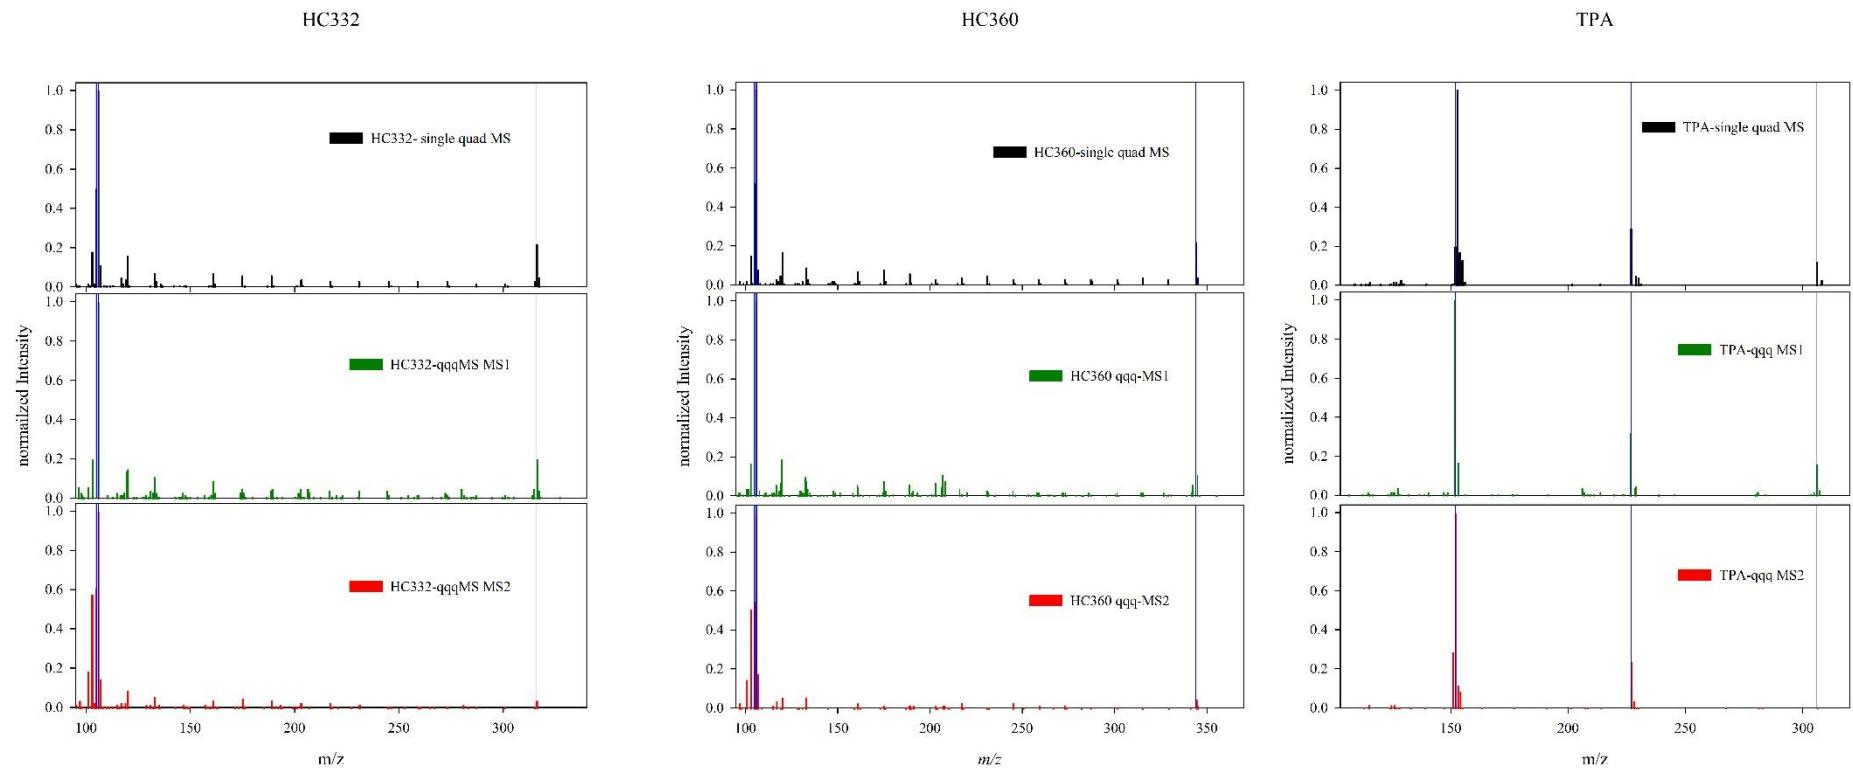

SI 3: Calibration plots of AsHCs and TPA with multiple reaction monitoring (MRM) in a concentration range of 1-500 $\mu\text{g As}\cdot\text{L}^{-1}$

	Ratio to base peak	Single quad MS	MS/MS 1	MS/MS 2
AsHC332	<i>m/z</i> 105 - <i>m/z</i> 106	50%	20%	61%
	<i>m/z</i> 316- <i>m/z</i> 106	22%	20%	4%
AsHC360	<i>m/z</i> 105 - <i>m/z</i> 106	52%	45%	55%
	<i>m/z</i> 344- <i>m/z</i> 106	22%	15%	5%
TPA	<i>m/z</i> 227 - <i>m/z</i> 152	29%	32%	24%
	<i>m/z</i> 306- <i>m/z</i> 152	12%	16%	1%

SI 4: Normalized ratios of fragments under three different MS conditions

SI 5: MS spectra of AsHCs and TPA under three different MS conditions. Spectra were recorded with solutions containing $500 \mu\text{g}\cdot\text{L}^{-1}$ of each species.
