Bulbul Feeding Young Pallid Cuckoo.—This unusual foster parent for a young Pallid Cuckoo was observed by me at Willoughby, on February 2, 1944. Over a period of several days the young Cuckoo, well able to fly, was observed following the Bulbuls about, continually clamouring for food. My brother observed the Bulbul feeding it on lantana berries.—N. CHAFFER, Roseville, N.S.W., 2/1/45.
