RESEARCH PAPERS
Spatial modelling of "alternative" future landscapes under climate change and fire suppression, Mont Do, New Caledonia. G. L. W. Perry and N. J. Enright. 248
An experimental investigation of the effects of human intrusion into breeding colonies of Bridled Terns Sterna anaethetus in the Great Barrier Reef. E. Gyuris. 265
Kahikatea Dacrycarpus dacrydioides and Totara-Matai Podocarpus totara-Prumnopitys taxifolia forest patches in the agricultural landscape, Westland, New Zealand: representatives of a past and future condition. C. J. Miller, D. A. Norton and T. K. Miller. 278
Birds of remnant vegetation on the Mornington Peninsula, Victoria, Australia: the role of interiors, edges and roadsides. M. J. Antos and J. G. White. 294
The impact of livestock grazing on the persistence of a perennial forb in a temperate Australian grassland. J. Dorrow and J. Ash. 302

BOOK REVIEWS
The Economics of Marine Resources and Conservation Policy — The Pacific Halibut Case Study with Commentary. E. Petersen. 308
Forests in a Full World. C. Slee. 309
The New Nature: Winners and losers in wild Australia. J. Jackson. 310
Index 311

Papers submitted to Pacific Conservation Biology are individually and fully peer reviewed by a minimum of two referees. Referees are independent of the editorial board and are chosen for their expertise in the subject area of the paper submitted. In addition, papers are vigorously reviewed and edited by the editorial board. Nonetheless, the views put by authors are their own and do not necessarily reflect those of the editors or the Publisher.

COPYRIGHT
Submission of a paper to Pacific Conservation Biology will be taken to imply that it presents original unpublished work, not under consideration for publication elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the Publisher if and when the article is accepted for publication. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microfilm or any other reproductions of similar nature, and translations.

Permission to publish illustrations must be obtained by the author before submission and any acknowledgements should be included in the captions.

Authors of papers in Pacific Conservation Biology should be subscribers to the journal. Please indicate whether one or more of the authors is a subscriber. Not subscribing will not affect the publication of the paper. However, whereas subscribers receive 25 free reprints and do not pay page charges, non-subscribers do not receive free reprints and will be asked to pay a nominal AUDS20 per printed page. These charges will be invoiced when page proofs are sent to authors. If they do not receive grant or institutional support for publication, contributors may request an exemption from page charges. This is similar to procedures followed by other journals, including the Australian Ecological Society and the Royal Society of Western Australia in the publication of their journals. Authors may accelerate publication of their papers to the next available issue without penalty to other authors by paying full page charges of AUDS65 per page. This still represents a significant publication subsidy.

For your convenience subscription forms have been enclosed. The increased cost is largely the result of the introduction of a government sales tax on knowledge in Australia. If you already subscribe, assist the conservation of biodiversity in the Pacific Region by encouraging a colleague and/or library to subscribe.
