The Parkes 2700 MHz survey (eighth part). Catalogue for the declination zone  $-65^\circ$  to  $-75^\circ$ . *J. G. Bolton and P. W. Butler*

*Abstract.* A catalogue of 515 radio sources is presented for the region between declinations  $-65^\circ$  and  $-75^\circ$  ( $0.374$  sr). The survey is believed to be complete to  $0.22$  Jy at 2700 MHz ( $\sim 900$  sources per steradian). Flux densities at 5009 MHz have been measured for most of the sources stronger than  $0.35$  Jy at 2700 MHz.
