

Supplementary material

**A South American fossil relative of *Phyllocladus*:
Huncocladus laubefelsii gen. et sp. nov. (Podocarpaceae),
from the early Eocene of Laguna del Hunco, Patagonia, Argentina**

Ana Andruchow-Colombo^{A,B,D}, *Peter Wilf*^C and *Ignacio H. Escapa*^{A,B}

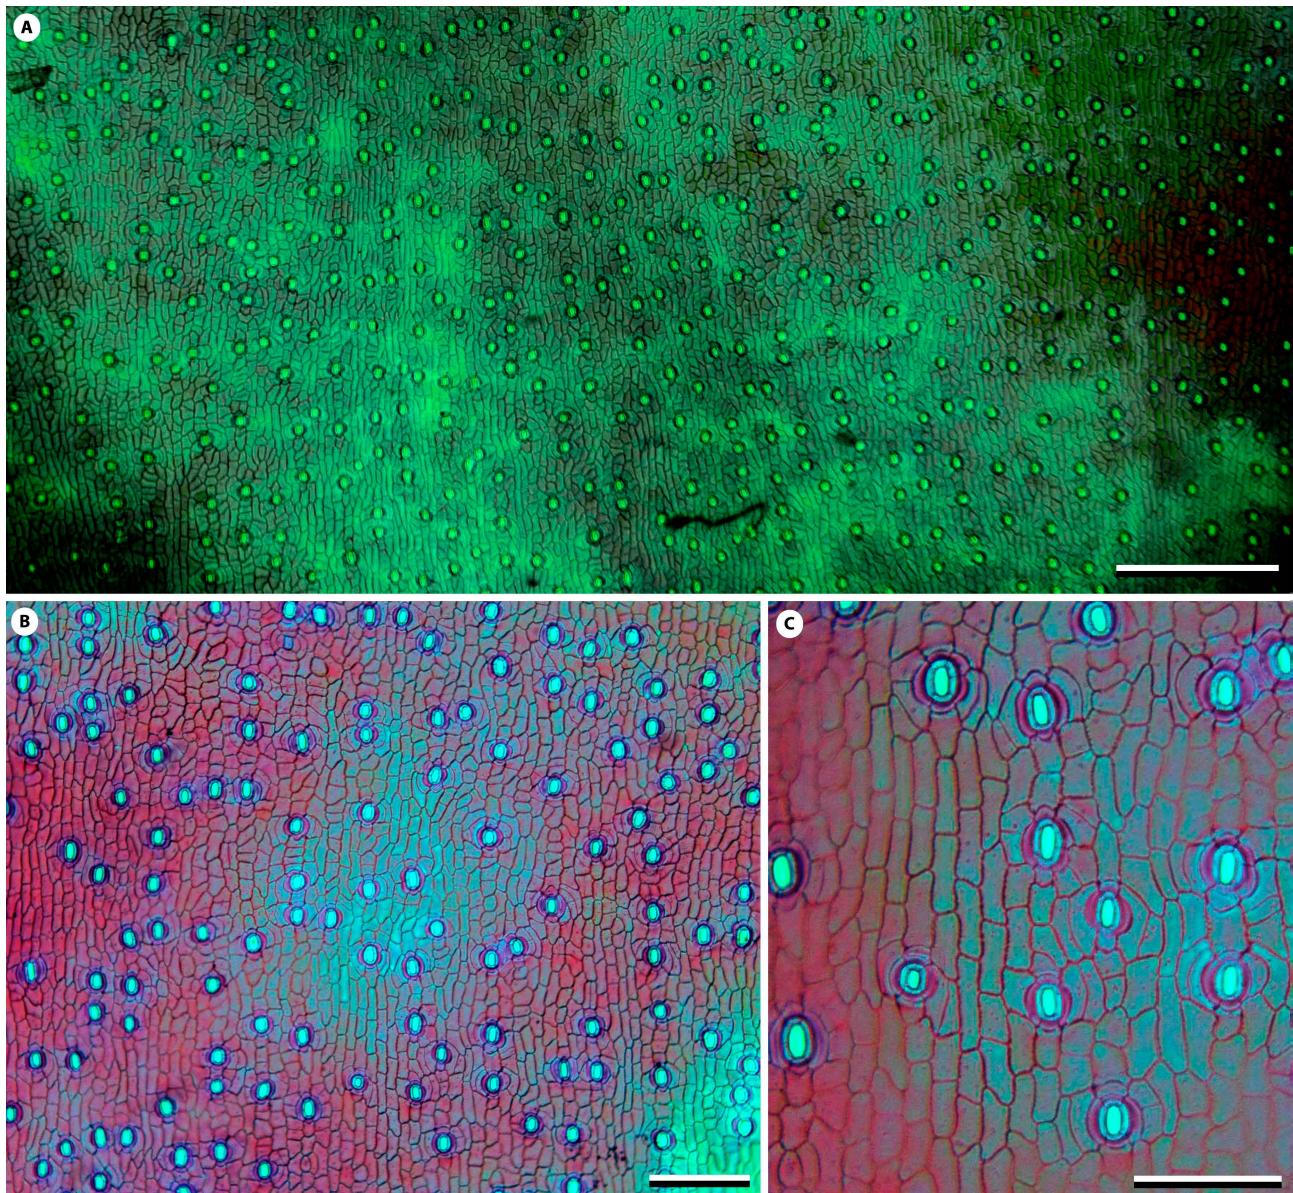

Fig. S1. A–C. Stomatal morphology of the extant species *Phyllocladus aspleniifolius* under light microscopy. A. General view of the cuticle showing the parallel oriented stomata arranged in discontinuous rows. B. Detail of the cuticle, showing rectangular epidermal cells arranged in rows; and the stomatal apparatuses parallel oriented, and arranged in discontinuous rows. C. Detail of a portion of the cuticle, showing stomatal apparatuses with four to six subsidiary cells, both polar and lateral, arranged in clear rings, and the well-developed Florin rings. Images provided by Dr G. J. Jordan. Scale bars: 500 µm (A), 200 µm (B) and 125 µm (C).

Character list

Accession numbers for the DNA markers are the same than for Andruchow-Colombo *et al.* (2019).

(00) Phyllotaxy of mature leaves: (0) helical; (1) whorled; (2) opposite to subopposite; (3) decussate; (4) opposite decussate. **(01) Mature leaf morphology:** (0) reduced leaves; (1) scaly-like; (2) broad. **(02) Leaf development:** (0) bilaterally flattened; (1) bifacially flattened. **(03) Leaf types:** (0) bilaterally flattened; (1) quadrangular in section; (2) bifacially flattened. **(04) Abaxial keel:** (0) absent; (1) present. **(05) Mature leaf margin:** (0) entire; (1) serrulate; (2) with marginal frill. **(06) Marginal frill:** (0) discontinuous; (1) continuous. **(07) Leaf base:** (0) decurrent; (1) petiolate. **(08) Leaf scar:** (0) round to subround; (1) linear; (2) rhomboidal; (3) rectangle. **(09) Phylloclades:** (0) absent; (1) present. **(10) Stomata on the adaxial side of the leaf:** (0) absent; (1) present. **(11) Stomata on the abaxial side of the leaf:** (0) absent; (1) present. **(12) Stomata relative concentration I:** (0) higher concentration on the adaxial side; (1) fairly equal concentration in both sides; (2) higher concentration on abaxial side. **(13) Stomata orientation:** (0) mostly parallel; (1) mostly oblique; (2) mostly perpendicular; (3) random. **(14) Stomatal organisation I:** (0) rows; (1) scattered. **(15) Stomatal organisation II:** (0) lateral bands; (1) throughout the width of the leaf; (2) central band. **(16) Polar subsidiary cells:** (0) absent; (1) present. **(17) Epidermal cells disposition:** (0) rows; (1) fairly scattered. **(18) Stomatal polar extensions on subsidiary cells:** (0) absent; (1) present. **(19) Florin ring:** (0) absent; (1) reduced; (2) well developed. **(20) Stomatal plugs:** (0) absent; (1) present. **(21) Epidermal cell shape:** (0) quadrangular; (1) isodiametric; (2) irregular. **(22) Epidermal cell-wall shape I:** (0) sinuous; (1) more or less straight. **(23) Epidermal cell-wall shape II:** (0) pitted; (1) entire. **(24) Buttresses in epidermal cell walls:** (0) absent; (1) present. **(25) Papillae:** (0) absent; (1) present. **(26) Leaf vasculature:** (0) multiple leaf vacular bundles; (1) single leaf vascular bundle. **(27) Ovuliferous cone morphology:** (0) spherical or globose; (1) subspherical or subglobose; (2) cylindrical; (3) irregular. **(28) Ovuliferous cone at maturity:** (0) mostly lignified (woody); (1) mostly coriaceous; (2) mostly fleshy; (3) papery like. **(29) Mature seed-cone size:** (0) very small (up to 1.5 cm long); (1) small (between 2 and 6); median (between 6 and 15); (2) large (between 15 and 30). **(30) Number of ovules per cone:** (0) 1 or 2; (1) between 3 and 20; (2) more than 20. **(31) Basal leaves of ovulate cones:** (0) absent; (1) present. **(32) Receptacle I:** (0) absent; (1) present. **(33) Receptacle II:** (0) larger than the seed covered by the epimatium; (1) smaller than the seed covered by the epimatium. **(34) Receptacle III:** (0) smooth; (1) warty. **(35) Megasporophyll organisation:** (0) tightly imbricated; (1) laxly imbricated. **(36) Ovuliferous complex (OC) phyllotaxis on the cone:** (0) helical; (1) decussate; (2) whorled. **(37) OC position:** (0) at the axil of the fertile bract; (1) at the surface of the fertile bract. **(38) OC basal morphology:** (0) peltate; (1) non-peltate. **(39) OC lateral extensions:** (0) absent; (1) present. **(40) OC lateral extension**

consistency: (0) woody; (1) thin. **(41) Bract-scale fusion at OC:** (0) absent; (1) present. **(42) Bract-scale degree of fusion:** (0) totally fused; (1) bract and scale fused in most of their extension; (2) free scale up to one-third of the OC length; (3) free scale more than one-third of the OC length. **(43) Bract-scale length:** (0) bract longer than scale; (1) bract and scale of approximately equal length; (2) scale longer than bract. **(44) Number of seeds per OC:** (0) 1; (1) 2 or 3; (2) 4 or more. **(45) Seed embedded in ovuliferous scale tissues:** (0) absent; (1) present. **(46) Aril:** (0) absent; (1) present. **(47) Epimatium:** (0) absent; (1) present. **(48) Epimatium shape:** (0) globose; (1) subglobose or ellipsoid; (2) pyriform; (3) cup like. **(49) Epimatium–seed integument fusion:** (0) absent (free); (1) present (fused). **(50) Epimatium size:** (0) mature seed projects from the epimatium; (1) mature seed protected by the epimatium. **(51) Young ovule orientation:** (0) erect; (1) oblique; (2) inverted. **(52) Mature-seed orientation:** (0) erect; (1) oblique; (2) Inverted. **(53) Seed dispersal:** (0) cones disintegrating at maturity; (1) cones not disintegrating at maturity. **(54) Seed abscission:** (0) absent; (1) present. **(55) Diaspore:** (0) seed; (1) ovuliferous complex; (2) cone. **(56) Integumentary seed wings:** (0) absent; (1) present. **(57) Integumentary-seed wing number:** (0) 1; (1) 2; (2) 3. **(58) Integumentary-seed wing symmetry:** (0) asymmetric; (1) symmetric.
