Supplementary Fig 1: A male *Acanthorhynchus superciliosus* probing flowers in a stand of seven *Anigozanthos humilis* inflorescences. It first lands on the stem of one of the tallest inflorescences and begins to probe the flower belonging to that stem. It then jumps to a lower stem and again probes, before eventually perching on small twigs on the ground and probing upwards at one of the shorter flowers. Captured on the 18/10/16 at 3:45pm

Supplementary Fig. 2: A male *Acanthorhynchus superciliosus* shows interest in the lower *Anigozanthos humilis* flowers while standing on the ground before proceeding to perch on the stem and probe one open flower before walking away. Captured on 11/9/16 at 11.40am.
