Table S2. Key species identified in NMDS ordination analysis of floristic variation between all gravelly pavement herbfield sites across the Bogong High Plains, Victoria using percent cover data. Species show significant correlation in the separation of sites floristically.

| Species | R ² value | p value |
|---------------------------------|----------------------|---------|
| <i>Agrostis sp. 2</i> | 0.463 | 0.006 |
| <i>Algae 1</i> | 0.487 | 0.005 |
| <i>Blindia robusta</i> | 0.571 | 0.001 |
| <i>Isolepis crassiuscula</i> | 0.470 | 0.006 |
| <i>Oreomyrrhis pulviniflora</i> | 0.485 | 0.001 |
| <i>Psychrophilia introloba</i> | 0.627 | 0.001 |
| <i>Rytidosperma sp.</i> | 0.604 | 0.001 |
| <i>Rytidosperma nivicola</i> | 0.586 | 0.001 |

Table S3. Key species identified in NMDS ordination analysis of floristic variation between all gravelly pavement herbfield sites across the Bogong High Plains using presence/absence data. Species show significant correlation in the separation of sites floristically.

| Species | R ² Value | p value |
|--------------------------------|----------------------|---------|
| <i>Campylopus bicolor</i> | 0.697 | 0.001 |
| <i>Celmisia sericophylla</i> | 0.437 | 0.007 |
| <i>Diplaspis nivis</i> | 0.455 | 0.006 |
| <i>Diplophyllum verrucosum</i> | 0.593 | 0.001 |
| <i>Epacris glacialis</i> | 0.560 | 0.001 |
| <i>Empodisma minus</i> | 0.498 | 0.001 |
| <i>Isolepis crassiuscula</i> | 0.679 | 0.001 |
| <i>Oreomyrrhis pulvinifica</i> | 0.661 | 0.003 |
| <i>Plantago glacialis</i> | 0.661 | 0.003 |
| <i>Rytidosperma</i> sp. | 0.682 | 0.001 |
| <i>Rytidosperma nivicola</i> | 0.634 | 0.001 |
| <i>Sphagnum cristatum</i> | 0.712 | 0.001 |

Table S4. Summary table of within-site NMDS ordination results of floristic variation at each gravelly pavement herbfield site.

Sig. of groupings is the results of ANOSIM analysis of variation between zones, bold values are significant ($p < 0.05$). R^2 values represent the maximum correlation between ordination and environmental vectors. Darker shading denotes a stronger correlation of the environmental variable.

| Site | NMDS Stress | Sig. of grouping (P value) | Rock r2 | Water r2 | Aspect r2 | Slope r2 |
|-------------------|-------------|----------------------------|---------|----------|-----------|----------|
| Nelse D | 0.12 | 0.112 | 0.097 | 0.317 | 0.201 | 0.201 |
| Nelse B | 0.13 | 0.001 | 0.468 | 0.386 | 0.323 | 0.126 |
| WRC SP | 0.16 | 0.001 | 0.207 | 0.196 | 0.238 | |
| Nelse A | 0.18 | 0.001 | 0.158 | 0.493 | | 0.121 |
| WRC Z1 | 0.12 | 0.001 | 0.630 | 0.332 | 0.433 | 0.286 |
| WRC A | 0.15 | 0.052 | 0.315 | 0.211 | 0.065 | 0.051 |
| Spion Kopje | 0.20 | 0.06 | 0.060 | 0.089 | 0.128 | 0.372 |
| WRC BP | 0.12 | 0.028 | 0.023 | 0.052 | 0.059 | 0.009 |
| WRC B | 0.18 | 0.001 | 0.442 | 0.397 | 0.155 | 0.103 |
| Cope Hut | 0.19 | 0.001 | 0.324 | 0.560 | 0.288 | 0.455 |
| Ruined Castle | 0.15 | 0.001 | 0.571 | 0.266 | 0.204 | 0.380 |
| Shannons Herbland | 0.18 | 0.137 | 0.261 | 0.039 | 0.178 | 0.178 |
| New Species | 0.21 | 0.001 | 0.272 | 0.092 | 0.125 | 0.316 |
| Sister Species | 0.20 | 0.001 | 0.485 | 0.022 | 0.293 | 0.081 |
| Harm's Plot | 0.16 | 0.005 | 0.417 | 0.214 | 0.000 | 0.083 |
| Cope Creek | 0.17 | 0.001 | 0.139 | 0.239 | 0.210 | 0.153 |

Table S5. Summary table of indicator species for each within-site ordination of gravelly pavement herbfields on the Bogong High Plains, Victoria. Species that were significant at only one site are not shown. Cell values represent the R² value from fitting vectors of maximum correlation. Darker shading denotes a stronger correlation.

| Site | Algae 1 | <i>Agrostis</i> sp. 1 | <i>C. gaudichaudiana</i> | <i>C. nivicola</i> | <i>C. sericeophylla</i> | <i>D. arcturi</i> | <i>D. verrucosum</i> | <i>I. aucklandica</i> | <i>I. crassiuscula</i> | <i>M. pedunculatum</i> | <i>O. pulvinifera</i> | <i>O. pumilio</i> | <i>P. introloba</i> | <i>P. uniceps</i> | <i>Riccardia</i> sp | <i>R. nivicola</i> | <i>S. cristatum</i> | <i>U. monanthos</i> |
