Fig. S1. Cladistic hypothesis for Nomoclastinae based on equal weighting (strict consensus of 125 trees), consensus of majority (>50%), successive weighting on retention index, three different concavities (K=1, 2, and 3). Outgroups excluded.

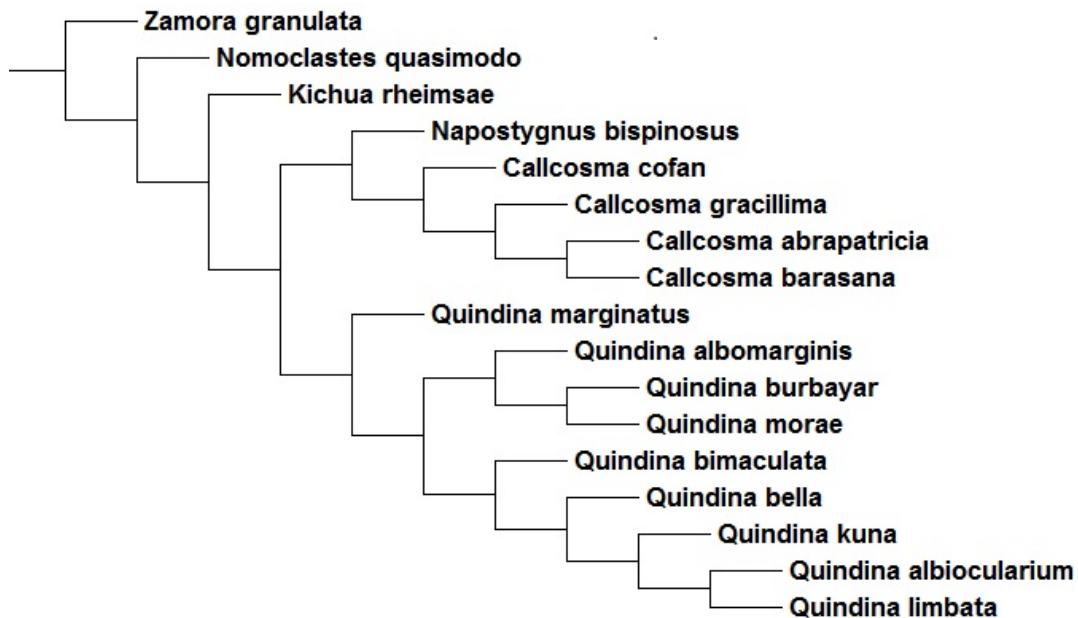

Equal weighting

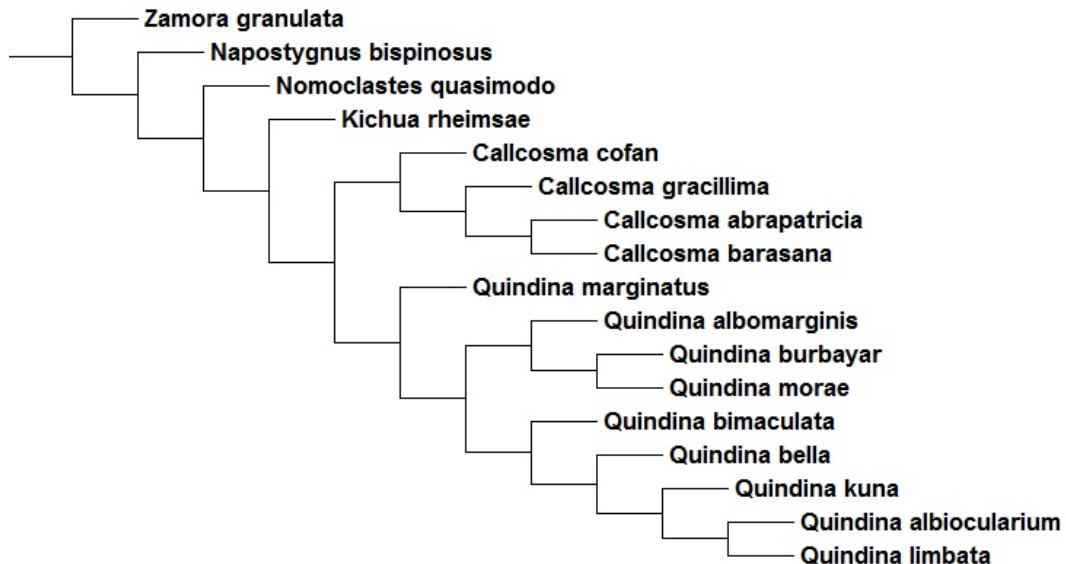

Majority Consensus (>50%)

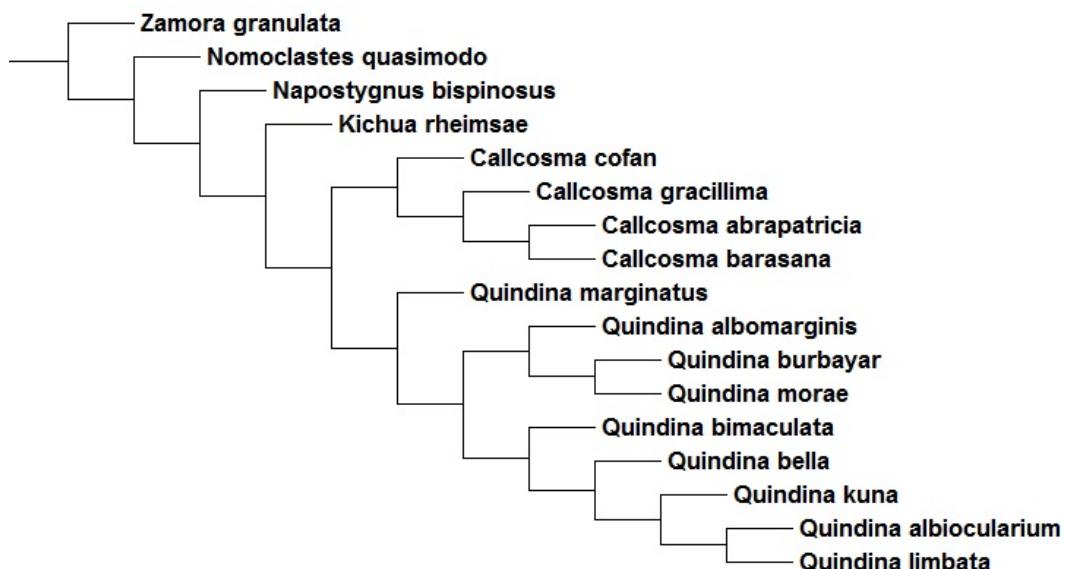

Concavity K=1 tree

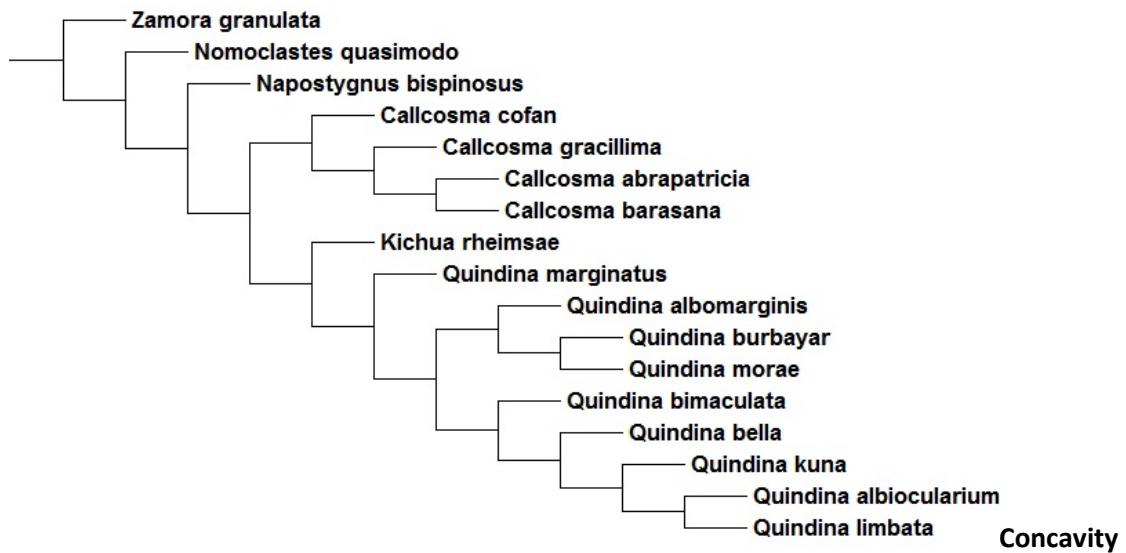

Concavity K=3, tree # 1, Successive weighting tree #3

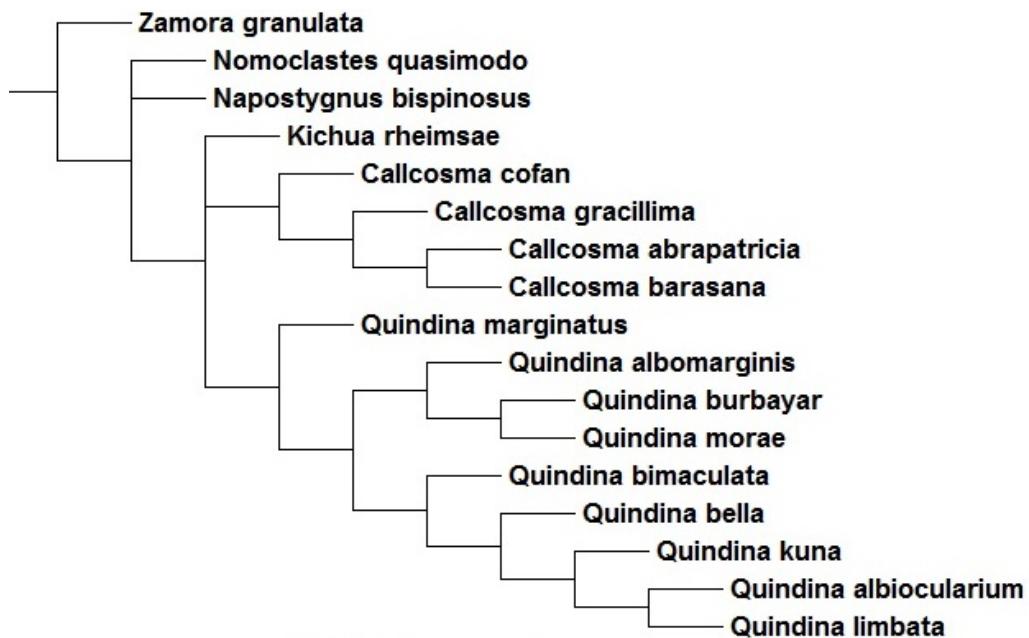

Concavity K=3, tree #2

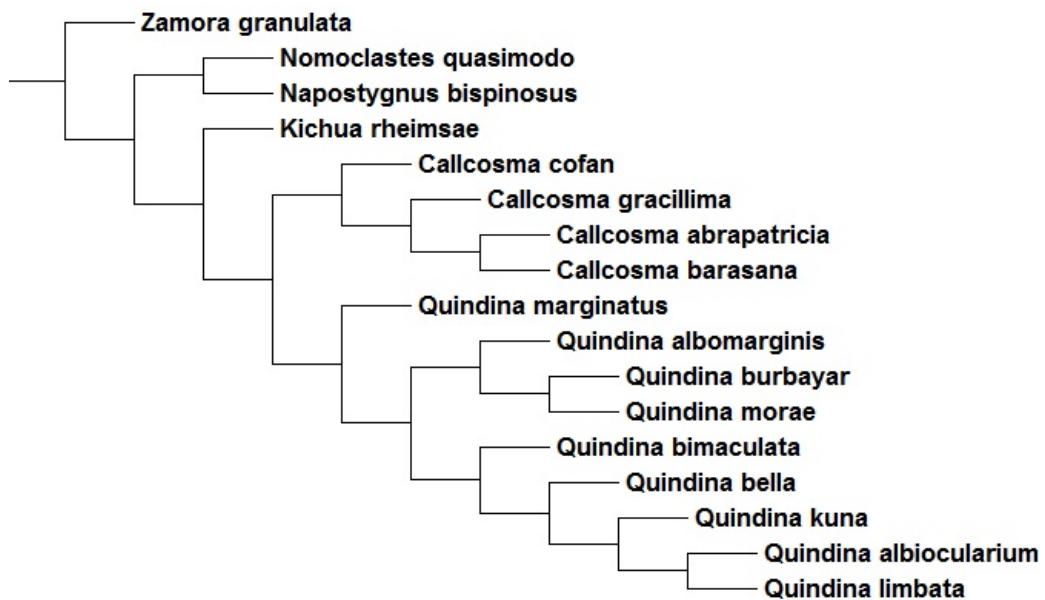

Concavity K=3, tree #3

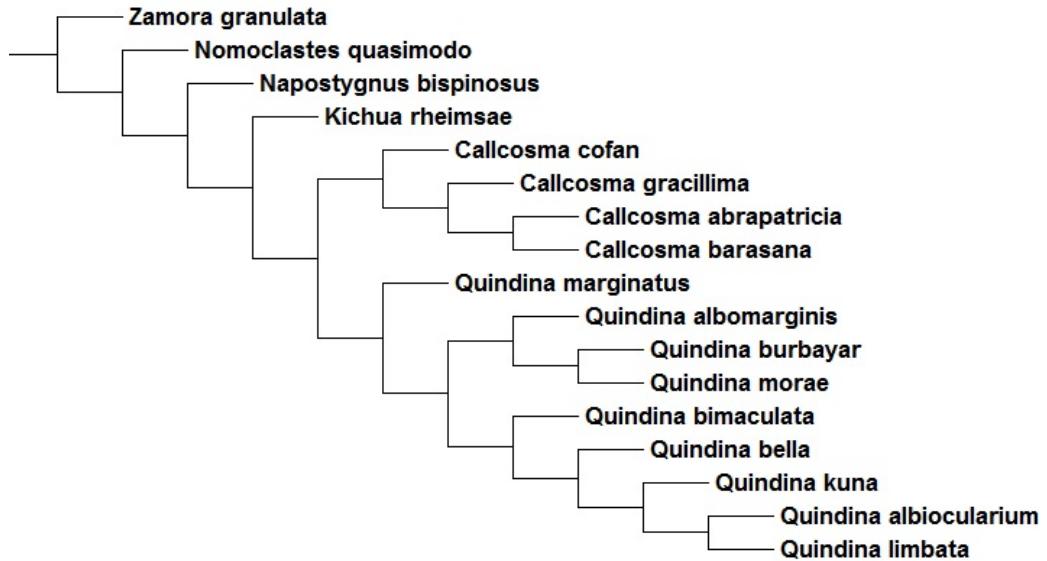

K=3 and K=6 strict consensus trees; successive weighting strict consensus tree

Concavity K=6, tree 1

Concavity K=6, tree 2; Successive weighting tree #2

Concavity K=6, tree 3; Successive weighting tree #1
