SCOPE

The Rangeland Journal publishes original work that makes a significant contribution to understanding the biophysical, social, cultural, economic, and policy influences affecting rangeland use and management throughout the world. Rangelands are defined broadly and include all environments where natural ecological processes predominate, and where values and benefits are based primarily on natural resources.

Articles may present the results of original research, contributions to theory or new conclusions reached from the review of a topic. All material must be well documented, critically analysed and objectively presented.
