New optical identifications from the fourteenth part of the Parkes 2700 MHz survey: Declinations -4° to -15° , right ascensions 10^{h} to 15^{h} . *Ann Savage and J. G. Bolton*

Abstract. Identifications are suggested for 36 radio sources from a survey of 0.247 sr of the southern sky, 14 with galaxies and 22 with possible quasi-stellar objects. The identifications were made from prints of the Palomar Sky Survey.
