#### Study, publication year Type of bias Support for judgment Judgment Dwver, 2000(41) Participants recruited from 2 SOPVs. Convenience sample. Methods for selection of Moderate risk Screening methodology was not given, unclear if consecutive patients were recruited. ++participants Serviced by Health workers. Participants were actively recruited and self-selected. Specimen collection conducted by two health workers at the venue was set up in the venue toilet facilities close to the entrance where patrons accessed lockers. In this way, many patrons could be spoken with soon after entry. At random intervals, the health workers would circulate among patrons occupying the lounge area, discussing the programme with individual patrons, distributing advertising leaflets and soliciting for specimens" promotional fliers for testing programme circulated 1 month before No inclusion or exclusion criteria were provided. Incentives not reported Culture used for oro-pharyngeal gono testing may underestimate prevalence. Methods for measuring High risk exposure and outcome +++Only 1 sopy collected gono oro-pharyngeal swabs. No ano-rectal swabs collected. Collection of oro-pharyngeal swab (health worker or participant) not reported variables Recent use of antibiotics not reported. Last STI testing not reported. Unclear if participants were symptomatic as No sexual/medical history collected Methods to control Moderate risk 'Given the location of the intervention, no attempt was made to record sexual or medical histories, so it was not possible to confounding ++conclusively determine whether these infections were asymptomatic. However, it can be assumed that any person with overt symptoms would have self disclosed' Not reported. Small sample size= 90 Statistical methods NR Not reported Conflict of interest NR

## Table S1. Assessment of bias

Lister, 2003(32)		
Methods for selection of	Moderate risk	Participants recruited from 6 SOPVs. Convenience sample.
participants	++	Serviced by Health care workers.
		Participants were actively recruited
		'patrons were only approached if they were 1) Standing or sitting alone, 2) In an area with good lighting, and 3) in areas
		thought to be unlikely sites for sexual activity'
		promotion only during recruitment times
		no patient identifying details collected
		No inclusion or exclusion criteria were provided.
		No patient incentives
Methods for measuring	Moderate risk	Sexual history collected
exposure and outcome	++	Recent use of antibiotics not reported. ('treatment' for sexual health was reported)
variables		Last STI testing not reported
		Patient collected ano-rectal sample, nurse collected oro-pharyngeal swab
		Unclear if all participants offered complete testing (vs risk based)
		Unclear if patrons participated on only 1 occasion; or at only 1 site
Methods to control	Moderate risk	Authors discussed use of NAATS in ano-rectal and oro-pharyngeal sites, STIs in participants who recently accessed care for
confounding	++	sexual health
Statistical methods	Moderate risk	Sample size = $521$
	++	
Conflict of interest	+	reported
Debattista, 2004(40)		
Methods for selection of	Moderate risk	Retrospective review of paticlientent records. 1997-2003.
participants	++	Participants recruited from 2 SOPVs. Convenience sample.
		Screening methodology was not given, unclear if consecutive patients were recruited.
		Serviced by Health care workers.
		Participants were actively recruited and self selected.
		Only participants who had syphilis testing were included.
		Incentives not reported
Methods for measuring	Moderate risk	Syphilis test modality not reported
exposure and outcome	++	Patient presentation not reported, unclear how stage of infection was determined.
variables		Participants declining syphilis testing not reported
		Recent use of antibiotics not reported.
		Last syphilis testing not reported. Previous syphilis treatment not reported
Methods to control	Moderate risk	Other potential exposures to syphilis not reported (i.e. COB, vertical transmission)
confounding	++	
Statistical methods	NR	Not reported, Sample size = 224

Conflict of interest	NR	Not reported
Lister, 2005(33)		
Methods for selection of	Moderate risk	Participants recruited from 4 SOPVs. Convenience sample or booked appointments.
participants	++	Serviced by Health care workers.
		Participants were actively recruited
		promotion onsite only during recruitment (business sized cards), 'occasional' advertising in gay press No client incentives
		Pt medical/sexual history collected
		Client registration required
Methods for measuring	Moderate risk	Sexual history collected
exposure and outcome		Recent use of antibiotics not reported. ('treatment' for sexual health was reported)
variables		Last STI testing not reported
variables		Client collected ano-rectal sample, nurse collected oro-pharyngeal swab
		Promotional Business sized cards used from march 2003 only (programme commenced Oct. 2002)
Methods to control	Moderate risk	participants who recently accessed care for sexual health reported
confounding	++	
Statistical methods	Moderate risk	Sample size 55
	++	
Conflict of interest	+	reported
Currie, 2006(38)		
Methods for selection of	Moderate risk	2 retrospective data audits of screening at multiple sites including 1 SOPV: 1)6/2001-9/2003 + 2)9/2003/2-4/2004
participants	++	SOPV screening times and regularity not reported
		Staff type not reported
		Screening methodology was not given, unclear if consecutive clients were recruited
		Recruitment not reported
		promotional posters for audit 2 only
		Clients registration not reported
		No inclusion or exclusion criteria were provided.
		Incentives not reported
Methods for measuring	Moderate risk	Audit 2: screening of oro-pharynx, urine and ano-rectum offered regardless of risk Unclear if all testing offered in audit 1.
exposure and outcome variables	++	ano-rectal specimens pt or clinician collected. Oro-pharyngeal specimen collection not reported.
variables		Recent use of antibiotics not reported.
		Last STI testing not reported.
		SOPV only data available for chalmydia infection only.
		Pt medical/sexual collected not reported
		Unclear if patrons participated on only 1 occasion; or at only 1 site
Methods to control	NR	Not reported
confounding		1
Statistical methods	NR	Not reported, Sample size from SOPV only unreported: amalgamated data reported.
Conflict of interest	+	reported

Sturrock, 2007(39)		
Methods for selection of participants	Moderate risk ++	Retrospective data audit of screening at multiple sites including 1 SOPV. Convenience sample.   Serviced by Health workers.   No inclusion or exclusion criteria were provided.   Incentives not reported   Screening methodology was not given, unclear if consecutive clients were recruited   Recruitment method not reported
Methods for measuring exposure and outcome variables	Moderate risk ++	Recent use of antibiot not reported Last STI testing not reported Specimen collection pt vs staff not reported Unclear if all pts offered all tests Medical/sexual history collected
Methods to control confounding	NR	Unclear if participants were symptomatic Not reported
Statistical methods	Moderate risk ++	Small sample size
Conflict of interest	+	reported
Birrell, 2010(35)		
Methods for selection of	Low risk	anonymous surveillance
participants	+	convenience sample of HIV screening at multiple sites including 4 SOPVs Serviced by community outreach workers No inclusion or exclusion criteria were provided. Incentives not reported Participants were actively recruited ' <i>patrons at each venue were approached by the outreach workers who walked through the</i> <i>venue and invited people to participate in the study</i> ' Promotion 1 week prior and during recruitment Results available on request only Incentives not reported
Methods for measuring exposure and outcome variables	Moderate risk ++ Moderate risk	Oral HIV testing via EIA and confirmed on western blot Medical/sexual history collected
Methods to control	Moderate risk	Unclear if participants were symptomatic
confounding	++	Unclear if patrons participated on only 1 occasion; or at only 1 site
Statistical methods	Moderate risk ++	Sample size n=465
Conflict of interest	+	reported
Pedrana, 2012(37)		
Methods for selection of participants	Low risk +	anonymous surveillance convenience sample of HIV screening at multiple sites including 4 SOPVs Promotion via social marketing, details not reported

		Serviced by trained field workers
		Inclusion criteria: >18, MSM last 5 years, verbal consent. I
		Incentives not reported
		Results not provided
Methods for measuring	Moderate risk	Oral HIV testing via EIA and confirmed on western blot
exposure and outcome	++	Medical/sexual history collected
variables		
Methods to control	Moderate risk	Unclear if participants were symptomatic
confounding	++	Unclear if patrons participated on only 1 occasion; or at only 1 site
Statistical methods	Moderate risk	n=364
Conflict of interest	+	reported
Bennett, 2016(31)		
Methods for selection of	High risk	Non-staffed, computer assisted self interview (CASI)- English
participants	+++	self selected
participants	ТТТ	screening available all SOPV hours
		Promotion via posters, locker magnets and announcements and peer educators (ad hoc basis)
		No exclusion criteria.
		Incentives not reported
Methods for measuring	Moderate risk	All specimens clients collected
exposure and outcome	++	Clients controlled screening choice- no health advice provided
variables		Recent use of antibiotics not reported.
		Last STI screen not reported
Methods to control	Moderate risk	Medical/sexual history collected via CASI
confounding	++	unknown if participants were symptomatic
comounding		discussed importance of pt awareness of service and level of comfort with CASI model
		Unclear if clients tested >1 time
Statistical methods	Moderate risk	Sample size 402
	++	
Conflict of interest	+	Reported
Currie 2011/Del Rosario 2	2011/Del Rosario 201	3(28–30)
Methods for selection of	Moderate risk	Amalgamated Retrospective data audit of screening at multiple sites including 1 SOPV.
participants	++	Serviced by Health workers.
1 1		No inclusion or exclusion criteria were provided.
		Incentives not reported
		Screening methodology was not given, unclear if consecutive clients were recruited
		Recruitment method not reported
Methods for measuring	Moderate risk	Recent use of antibiotics not reported.
exposure and outcome	++	Last STI testing not reported
variables		Specimen collection pt vs staff not reported

		Unclear if all pts offered all tests
		Medical/sexual history not reported
Methods to control	NR	Not reported
confounding		
Statistical methods	NR	Not reported
Conflict of interest	NR	Not reported
Holt, 2015(36)	THE	
Methods for selection of	Low risk	convenience sample of HIV screening at multiple sites including SOPVs nationally
participants	+	Serviced by trained field workers
participante		Inclusion criteria: >18, MSM last 5 years
		Incentives not reported
		Anonymous, however participant details collected if participant wanted their result
Methods for measuring	Moderate risk	Oral HIV testing via EIA and confirmed on western blot
exposure and outcome	++	Medical/sexual history collected
variables		
Methods to control	low risk	Unclear if participants were symptomatic
confounding	++	Unclear if patrons participated on only 1 occasion; or at only 1 site
8		Controlled fro recruitment, location, sexual practices, demographics, HIV testing history, self reported HIV status and drug
		use.
Statistical methods	Moderate risk	Sample size: SOPV data amalgamated with recruitment from 'gay bar' = 1136
	++	
Conflict of interest	+	reported
Ooi, 2016(34)		
Methods for selection of	Moderate risk	Participants recruited from 1 SOPVs. Convenience sample, consecutive clients were recruited.
participants	++	Serviced by 1 Health worker and 1 peer worker
1 1		Participants were actively recruited
		promotion only during recruitment times
		symptomatic clients excluded.
		Incentives not reported
		Sexual history collected
Methods for measuring	Moderate risk	all testing offered to each person
exposure and outcome	++	Recent use of antibiotics not reported.
variables		Client collected ano-rectal sample, nurse collected oro-pharyngeal swab
Methods to control	++	asymptomatic tested only.
confounding*		Clients first visit only.
Statistical methods	NR	Sample size=55
Conflict of interest	NR	Not reported
