Two comparisons were made. (i) Values obtained for control and treated samples for each genotype were compared with each other. Significant differences between the genotypes are marked in bold. (ii) Treated and control samples of each genotype were compared. Significant differences are indicated with an asterisk. nd, not determined. The table shows the average value plus the standard error. The leaves were harvested after drought stress application (25 d for NOJ, and 27 d for SUL). Data sets contained five replicates per sample (three samples) and were statistically analysed by t test and one-way ANOVA using the algorithm incorporated into Microsoft Excel 2002 (Microsoft Corporation, Seattle, WA, USA). Differences were determined to be statistically significant at $P < 0.05$. Principal Component Analysis (PCA) was performed using XLSTAT-Pro (v.7.5.3) program (Addinsoft, NY, USA).
