Fig. S1 Venn diagram showing number of transcripts detected in M54 and 753F after cold stress for 4 and 24 h.

Fig. S2 COG function classification of consensus sequence. A, M54 after cold treatment for 4 h; B, M54 for 24 h; C, 753F for 4 h; D, 753F for 24 h.

Fig. S3 KEGG map of the photosynthesis-antenna proteins pathway. Results are an analysis of DEGs as determined by RNA-seq, comparing cold-treated samples to untreated controls. Boxes with a red frame indicate the corresponding DEGs were upregulated in the cold-treated samples, boxes with a green frame indicate the corresponding DEGs were downregulated in the cold-treated samples, boxes with a blue frame indicate some of the corresponding DEGs were downregulated and others were upregulated, and those without any colored frame indicate the expression levels of the corresponding genes were not changed.

Fig. S4 KEGG map of the photosynthesis pathway. Results are an analysis of DEGs as determined by RNA-seq, comparing cold-treated samples with untreated controls. Boxes with a red frame indicate the corresponding DEGs were upregulated in the cold-treated samples, boxes with a green frame indicate the corresponding DEGs were downregulated in the cold-treated samples, boxes with a blue frame indicate some of the corresponding DEGs were downregulated and others were upregulated, and those without any colored frame indicate the expression levels of the corresponding genes were not changed.

Fig. S5 KEGG map of the carbon fixation in photosynthetic organisms pathway. Results are an analysis of DEGs as determined by RNA-seq, comparing cold-treated samples to untreated controls. Boxes with a red frame indicate the corresponding DEGs were upregulated in the cold-treated samples, boxes with a green frame indicate the corresponding DEGs were downregulated in the cold-treated samples, boxes with a blue frame indicate some of the corresponding DEGs were downregulated and others were upregulated, and

those without any colored frame indicate the expression levels of the corresponding genes were not changed.

Legend: DEGs mapped to the metabolism pathway of photosynthesis, photosynthesis-antenna proteins and carbon fixation in photosynthetic organisms.“FDR” means false discovery rate, “FC” means fold change,“Inf” means Infinite, “-” means the expression of the gene was not changed under salt stress. Some of the DEGs appeared several times in the table as they are involved in multiple pathways.

Table S4 DEGs mapped to KEGG pathways related to secondary metabolism

Gene ID	Annotation	M54-4 h		M54-24 h		753F-4 h		753F-24 h	
		FDR	Log ₂ FC	FDR	Log ₂ FC	FDR	Log ₂ FC	FDR	Log ₂ FC

Legend: DEGs mapped to the metabolism pathway of photosynthesis, photosynthesis-antenna proteins and carbon fixation in photosynthetic organisms.“FDR” means false discovery rate, “FC” means fold change,“Inf” means Infinite, “-” means the expression of the gene was not changed under salt stress. Some of the DEGs appeared several times in the table as theyare involved in multiple pathways.

Table S5 Up-regulated genes related to transcription factor

Gene ID	Annotation	Log ₂ FC			
		M54-4 h	M54-24 h	753F-4 h	753F-24 h
