**Table S1:** Untargeted metabolites identified in the methanol extracts of leaves from the parasitic plant *Viscum schimperi* and its host tree *Acacia gerrardii* by ultra-high performance liquid chromatography quadrupole time-of-flight mass spectrometry (UHPLC-Q-TOF-MS2). The chosen sample groups were leaves from the host plant and located before the haustorium from the root (HP-BH), leaves from the parasitic plant (PP), and leave from the host plant and located after the haustorium from the root (HP-AH).
